Colloidal Crystals of Spheres and Cubes in Real and Reciprocal Space

Janne-Mieke Meijer, 2015-06-11 This thesis presents an in depth study on the effect of colloidal particle shape and formation mechanism on self organization and the final crystal symmetries that can be achieved It demonstrates how state of the art X ray diffraction techniques can be used to produce detailed characterizations of colloidal crystal structures prepared using different self assembly techniques and how smart systems can be used to investigate defect formation and diffusion in situ One of the most remarkable phenomena exhibited by concentrated suspensions of colloidal particles is the spontaneous self organization into structures with long range spatial and or orientational orders The study also reveals the subtle structural variations that arise by changing the particle shape from spherical to that of a rounded cube In particular the roundness of the cube corners when combined with the self organization pathway convective assembly or sedimentation was shown to influence the final crystal symmetries

Applications of NeutroGeometry and AntiGeometry in Real World Erick Gonzalez-Caballero ,2023-01-01 NeutroGeometries are those geometric structures where at least one definition axiom property theorem among others is only partially satisfied In AntiGeometries at least one of these concepts is never satisfied Smarandache Geometry is a geometric structure where at least one axiom or theorem behaves differently in the same space either partially true and partially false or totally false but its negation done in many ways This paper offers examples in images of nature everyday objects and celestial bodies where the existence of Smarandachean or NeutroGeometric structures in our universe is revealed On the other hand a practical study of surfaces with characteristics of NeutroGeometry is carried out based on the properties or more specifically NeutroProperties of the famous quadrilaterals of Saccheri and Lambert on these surfaces The article contributes to demonstrating the importance of building a theory such as NeutroGeometries or Smarandache Geometries because it would allow us to study geometric structures where the well known Euclidean Hyperbolic or Elliptic geometries are not enough to capture properties of elements that are part of the universe but they have sense only within a NeutroGeometric framework It also offers an axiomatic option to the Riemannian idea of Two Dimensional Manifolds In turn we prove some properties of the NeutroGeometries and the materialization of the symmetric triad

Barbara Green explores the ways in which the feminist press used its correspondence columns, women's pages, fashion columns, and short fictions to display the quiet hum of everyday life that provided the backdrop to the more dramatic events of feminist activism such as street marches or protests. Positioning itself at the interface of periodical studies and everyday life studies, *Feminist Periodicals and Daily Life* illuminates the more elusive aspects of the periodical archive through a study of those periodical forms that are particularly well suited to conveying the mundane. Feminist journalists such as Rebecca West, Teresa Billington Greig, E. M. Delafield, and Emmeline Pethick Lawrence provided new ways of conceptualizing the significance of domestic life and imagining new possibilities for daily routines. p
