Meathooked Marta Zaraska, 2016-02-23 One of the great science and health revelations of our time is the danger posed by meat eating Every day it seems we are warned about the harm producing and consuming meat can do to the environment and our bodies Many of us have tried to limit how much meat we consume and many of us have tried to give it up altogether But it is not easy to resist the smoky cured barbequed and fried delights that tempt us What makes us crave animal protein and what makes it so hard to give up And if consuming meat is truly unhealthy for human beings why didn't evolution turn us all into vegetarians in the first place In *Meathooked* science writer Marta Zaraska explores what she calls the meat puzzle our love of meat despite its harmful effects Zaraska takes us on a witty tour of meat cultures around the world stopping in India's unusual steakhouses animal sacrifices at temples in Benin and labs in the Netherlands that grow meat in petri dishes From the power of evolution to the influence of the meat lobby and from our genetic makeup to the traditions of our foremothers she reveals the interplay of forces that keep us hooked on animal protein A book for everyone from the diehard carnivore to the committed vegan *Meathooked* illuminates one of the most enduring features of human civilization ultimately shedding light on why meat eating will continue to shape our bodies and our world into the foreseeable future

Introducing Apologetics James E. Taylor, 2006-03-01 Questions about the truthfulness of Christianity deserve thoughtful balanced and reasonable answers James Taylor provides a fresh comprehensive survey of the many methods of Christian apologetics using a unique whole person approach He addresses core apologetics issues facing Christians in the twenty first century including the evidence for God's existence the challenge of evil the uniqueness of Jesus Christ world religions and more This accessible text now in paper will appeal to students and all who wrestle with intellectual obstacles to faith Each chapter contains an outline summary list of basic terms reflection and discussion questions and guide to further reading Chapter overviews and sidebars enhance the text Defending Sin Hans Madueme, 2024-05-28 The conflict between the natural sciences and Christian theology has been going on for centuries Recent advances in the fields of evolutionary biology behavioral genetics and neuroscience have intensified this conflict particularly in relation to origins the fall and sin These debates are crucial to our understanding of human sinfulness and necessarily involve the doctrine of salvation Theistic evolutionists have labored hard to resolve these tensions between science and faith but Hans Madueme argues that the majority of their proposals do injustice both to biblical teaching and to long standing doctrines held by the mainstream Christian tradition In this major contribution to the field of science and religion Madueme demonstrates that the classical

notion of sin reflected in Scripture the creeds and tradition offers the most compelling and theologically coherent account of the human condition He answers pressing challenges from the physical sciences on both methodological and substantive levels Scholars pastors students and interested lay readers will profit from interacting with the arguments presented here
