No Small Matter Science On The Nanoscale:

No Small Matter Felice C. Frankel, George M. Whitesides, 2009-11-09 No Small Matter uses dazzling images and evocative descriptions to reveal the virtually invisible realities and possibilities of nanoscience It considers both the benefits and the risks of nano microtechnology from the potential of quantum computers and single molecule genomic sequencers to the concerns about self replicating nanosystems

Undisciplining Knowledge Harvey J. Graff, 2015-08-01 The first critical history of interdisciplinary efforts and movements in the modern university Interdisciplinarity or the interrelationships among distinct fields disciplines or branches of knowledge in pursuit of new answers to pressing problems is one of the most contested topics in higher education today Some see it as a way to break down the silos of academic departments and foster creative interchange while others view it as a destructive force that will diminish academic quality and destroy the university as we know it In Undisciplining Knowledge acclaimed scholar Harvey J Graff presents readers with the first comparative and critical history of interdisciplinary initiatives in the modern university Arranged chronologically the book tells the engaging story of how various academic fields both embraced and fought off efforts to share knowledge with other scholars It is a story of myths exaggerations and misunderstandings on all sides Touching on a wide variety of disciplines including genetic biology sociology the humanities communications social relations operations research cognitive science materials science nanotechnology cultural studies literacy studies and biosciences the book examines the ideals theories and practices of interdisciplinarity through comparative case studies Graff interweaves this narrative with a social institutional and intellectual history of interdisciplinary efforts over the 140 years of the modern university focusing on both its implementation and evolution while exploring substantial differences in definitions goals institutional locations and modes of organization across different areas of focus Scholars across the disciplines specialists in higher education administrators and interested readers will find the book s multiple perspectives and practical advice on building and operating and avoiding fallacies and errors in interdisciplinary research and education invaluable

associated with nanosized particles during use along with the ethical issues related to nanobiotechnology Surface Patterning with Colloidal Monolayers Nicolas Vogel,2012-12-28 How can the two dimensional crystallization of colloids be used to form highly ordered colloidal monolayers on solid substrates What application does this have in generating arrays of nanostructures These questions are addressed in Nicolas Vogel s thesis Vogel describes a simple preparation method for the formation of uniform colloidal crystals over large areas which he refines to yield more complex binary and non close packed arrangements These monolayers can be applied to a process termed colloidal lithography which is used to prepare high quality metallic nanostructures with tailored properties defined to suit a variety of applications Moreover the author describes a method used to create metallic nanodot arrays with a resolution unprecedented for colloidal lithography methods The author also outlines methodology to embed nanoparticle arrays into the substrate which is developed and used to design robust re usable biosensor platforms and nanoscale patterns of biomimetic lipid bilayer membranes The research in this thesis has led to a large number of publications in internationally renowned journals Emulsions, Foams, Suspensions, and Aerosols Laurier L. Schramm,2014-08-12 This is the first book to provide an integrated introduction to the nature formation and occurrence stability propagation and uses of the most common types of colloidal dispersion in the process related industries The primary focus is on the applications of the principles paying attention to practical processes and problems This is done both as part of the treatment of the fundamentals where appropriate and also in the separate sections devoted to specific kinds of industries Throughout the treatment is integrated with the principles of colloid and interface science common to each dispersion type presented for each major physical property class followed by separate treatments of features unique to emulsions foams or suspensions The first half of the book introduces the fundamental principles introducing readers to suspension formation and stability characterization and flow properties emphasizing practical aspects throughout The following chapters discuss a wide range of industrial applications and examples serving to emphasize the different methodologies that have been successfully applied The author assumes no prior knowledge of colloid chemistry and with its glossary of key terms complete cross referencing and indexing this is a must have for graduate and professional scientists and engineers who may encounter or use emulsions foams or suspensions or combinations thereof whether in process design industrial production or in related R D fields **Materials Science: Nanotechnology and Applications** H.D. Kumar,2011-04-09 Prompted by the substantial impact of nanoscience and nanotechnology on the diverse materials metals and minerals being used by over six billion people on the disturbingly overcrowding increasingly mobile and energy guzzling planet the author has attempted to produce a readable and comprehensive outline of the physics chemistry biology and engineering dimensions and processes relating to the exploitation of various kinds of materials nanomaterials and nanoparticles with special reference to carbon based and silicon based materials The study introduces the reader to novel superfunctional and composite materials metamaterials electronics electrets carbon nanotubes nanowires molecular

transistors and graphene currently attracting research focus Besides its overall utility for all scientists and engineers the monograph would serve as a supplementary textbook for advanced courses in several areas of engineering physics chemistry nanotechnology pharmaceutical biotechnology and biomedicine in traditional universities engineering colleges institutes of technology and medical colleges It is supported by the most up to date literature citations of direct interest to researchers on materials science and nanotechnology

Political Sociology and the People's Health Jason Beckfield, 2018-08-10 In a stirring new synthesis Political Sociology and the People's Health advances the debate over social inequalities in health by offering a new set of provocative hypotheses around how health is distributed in and across populations It joins political sociology's macroscopic insights into social policy labor markets and the racialized and gendered state with social epidemiology's conceptualizations and measurements of populations etiologic periods and distributions The result is a major leap forward in how we understand the relationships between institutions and inequalities and essential reading for those in public health sociology and beyond

Art, Science, and the Politics of Knowledge Hannah Star Rogers, 2022-05-17 How the tools of STS can be used to understand art and science and the practices of these knowledge making communities In Art Science and the Politics of Knowledge Hannah Star Rogers suggests that art and science are not as different from each other as we might assume She shows how the tools of science and technology studies STS can be applied to artistic practice offering new ways of thinking about people and objects that have largely fallen outside the scope of STS research Arguing that the categories of art and science are labels with specific powers to order social worlds and that art and science are best understood as networks that produce knowledge Rogers shows through a series of cases the similarities and overlapping practices of these knowledge communities The cases which range from nineteenth century artisans to contemporary bioartists illustrate how art can provide the basis for a new subdiscipline called art science and technology studies ASTS offering hybrid tools for investigating art science collaborations Rogers's subjects include the work of father and son glassblowers the Blaschkas whose glass models produced in the nineteenth century for use in biological classification are now displayed as works of art the physics photographs of documentary photographer Berenice Abbott and a bioart lab that produces work functioning as both artwork and scientific output Finally Rogers an STS scholar and contemporary art science curator draws on her own work to consider the concept of curation as a form of critical analysis
