Predictive Health How We Can Reinvent Medicine To Extend Our Best Years:

Predictive Health Kenneth L. Brigham, Michael M E Johns, 2012-10-02 Our health care system is crippled by desperate efforts to prevent the inevitable A third of the national Medicare budget nearly 175 billion is spent on the final year of life and a third of that amount on the final month often on expensive and futile treatments Such efforts betray a fundamental flaw in how we think about healthcare we squander resources on hopeless situations instead of using them to actually improve health In Predictive Health distinguished doctors Kenneth Brigham and Michael M E Johns propose a solution invest earlier and use science and technology to make healthcare more available and affordable Every child would begin life with a post natal genetic screen when potential risk say for type II diabetes or heart disease would be found More data on biology behavior and environment would be captured throughout her life Using this information health care workers and the people they care for could forge personal strategies for healthier living long before a small glitch blows up into major disease This real health care wouldn't just replace much of modern disease care it would make it obsolete The result according to Brigham and Johns will be a life defined by a long stay at top physical and mental form rather than an early peak and long decline Accomplishing this goal will require new tools new clinics fewer doctors and more mentors smarter companies and engaged patients In short it will require a revolution Thanks to a decade long collaboration between Brigham Johns and others it is already underway An optimistic plan for reducing or eliminating many chronic diseases as well as reforming our faltering medical system Predictive Health is a deeply knowledgeable deeply humane proposal for how we can reallocate expenses and resources to prolong the best years of life rather than extending the worst

the Twenty-First Century Holly Fernandez Lynch, I. Glenn Cohen, 2015-09-08. In its decades long effort to assure the safety, efficacy, and security of medicines and other products, the Food and Drug Administration has struggled with issues of funding, proper associations with industry, and the balance between consumer choice and consumer protection. Today, these challenges are compounded by the pressures of globalization, the introduction of novel technologies, and fast evolving threats to public health. With essays by leading scholars and government and private industry experts, *FDA in the Twenty First Century* addresses perennial and new problems and the improvements the agency can make to better serve the public good. The collection features essays on effective regulation in an era of globalization, consumer empowerment, and comparative effectiveness, as well as questions of data transparency, conflicts of interest, industry responsibility, and innovation policy, all with an emphasis on pharmaceuticals. The book also intervenes in the debate over off label drug marketing and the proper role of the FDA before and after a drug goes on the market. Dealing honestly and thoroughly with the FDA's successes and failures, these essays rethink the structure, function, and future of the agency and the effect policy innovations may have on regulatory institutions abroad. **Implementing Biomedical Innovations into Health, Education, and Practice** James O.
