The Legacy of Niels Henrik Abel Olav Arnfinn Laudal, Ragni Piene, 2011-06-28 This book contains a series of research papers on subjects related to the work of Niels Henrik Abel written by some of the foremost specialists in their fields Some of the authors have been specifically invited to present papers discussing the influence of Abel in a mathematical historical context Others have submitted papers presented at the Abel Bicentennial Conference Oslo June 3 8 2002 The idea behind the book has been to produce a text covering a substantial part of the legacy of Abel as perceived at the beginning of the 21st century It is accompanied by a CD ROM with a large amount of information related to Niels Henrik Abel such as on the Abel Centennial in 1902 and the Abel Bicentennial Conference in 2002 the launching of the Abel Prize Abel monuments and stamps banknotes coins etc issued in honour of Niels Henrik Abel *Niels Henrik Abel* Øystein Ore, 1974 This is a story of more than a century ago about a circle of young scientists and in particular one among them a mathematician Niels Henrik Abel He is well known to any mathematician of today indeed few men have their name associated with so many results and concepts in modern mathematics This however is not the main concern in this book It is rather the simple story of a scientist his family and friends his hopes and sorrows his triumphs and tragedies Many great lives rich in outer events have inspired biographers But the profound humanity of a searching soul may provide the background for an equally arresting chronicle the heart warming tale of a young man who set out from a little Norwegian town to explore the world of science A Richer Picture of Mathematics David E. Rowe, 2018-02-13 Historian David E Rowe captures the rich tapestry of mathematical creativity in this collection of essays from the Years Ago column of The Mathematical Intelligencer With topics ranging from ancient Greek mathematics to modern relativistic cosmology this collection conveys the impetus and spirit of Rowe's various and many faceted contributions to the history of mathematics Centered on the Göttingen mathematical tradition these stories illuminate important facets of mathematical activity often overlooked in other accounts Six sections place the essays in chronological and thematic order beginning with new introductions that contextualize each section The essays that follow recount episodes relating to the section's overall theme All of the essays in this collection with the exception of two appeared over the course of more than 30 years in The Mathematical Intelligencer Based largely on archival and primary sources these vignettes offer unusual insights into behind the scenes events Taken together they aim to show how Göttingen managed to attract an extraordinary array of talented individuals several of whom contributed to the development of a new mathematical culture during the first decades of the twentieth century The Abel Prize 2008-2012 Helge Holden, Ragni Piene, 2014-01-21 Covering the years 2008 2012 this book profiles the life and work of recent winners of the Abel Prize John G Thompson and Jacques Tits 2008 Mikhail Gromov 2009 John T Tate Jr 2010 John W Milnor 2011 Endre Szemerédi 2012 The profiles feature autobiographical information as well as a description of each mathematician's work In addition each profile contains a complete bibliography a curriculum vitae as well as photos old and new As an added feature interviews with the Laureates

are presented on an accompanying web site <http://extras.springer.com> The book also presents a history of the Abel Prize written by the historian Kim Helsen and includes a facsimile of a letter from Niels Henrik Abel which is transcribed translated into English and placed into historical perspective by Christian Skau This book follows on The Abel Prize 2003 2007 The First Five Years Springer 2010 which profiles the work of the first Abel Prize winners

Dirichlet Branes and Mirror Symmetry, 2009 Research in string theory has generated a rich interaction with algebraic geometry with exciting new work that includes the Strominger Yau Zaslow conjecture This monograph builds on lectures at the 2002 Clay School on Geometry and String Theory that sought to bridge the gap between the languages of string theory and algebraic geometry presenting an updated discussion that includes subsequent developments The group of distinguished mathematicians and mathematical physicists who produced this monograph worked as a team to create a unique volume Its overall goal is to explore the physical and mathematical aspects of Dirichlet branes The narrative is organized around two principal ideas Kontsevich's Homological Mirror Symmetry conjecture and the Strominger Yau Zaslow conjecture The authors explain how Kontsevich's conjecture is equivalent to the identification of two different categories of Dirichlet branes They also explore the ramifications and current state of the Strominger Yau Zaslow conjecture They relate the ideas to active areas of research that include the McKay correspondence topological quantum field theory and stability structures The authors were not satisfied to tell their story twice from separate mathematics and physics points of view Instead theirs is a unified presentation offered in a way that both mathematicians and physicists can follow without having all of the foundations of both subjects at their immediate disposal

Complex Differential and Difference Equations Galina Filipuk, Alberto Lastra, Sławomir Michałik, Yoshitsugu Takei, Henryk Żoładek, 2019-11-18 With a balanced combination of longer survey articles and shorter peer reviewed research level presentations on the topic of differential and difference equations on the complex domain this edited volume presents an up to date overview of areas such as WKB analysis summability resurgence formal solutions integrability and several algebraic aspects of differential and difference equations

A History of Mathematical Impossibility Jesper Lützen, 2023 This book tells the history of impossibility theorems starting with the ancient Greek proof of the incommensurability of the side and the diagonal in a square

Lectures on Gaussian Integral Operators and Classical Groups Yu. A. Neretin, 2011 This book is an elementary self contained introduction to some constructions of representation theory and related topics of differential geometry and analysis Topics covered include the theory of various Fourier like integral operators such as Segal Bargmann transforms Gaussian integral operators in L^2 and in the Fock space integral operators with theta kernels the geometry of real and p -adic classical groups and symmetric spaces The heart of the book is the Weil representation of the symplectic group real and complex realizations relations with theta functions and modular forms p -adic and adelic constructions and representations in Hilbert spaces of holomorphic functions of several complex variables This book is addressed to graduate students and researchers in representation theory differential geometry and

operator theory Prerequisites are standard university courses in linear algebra functional analysis and complex analysis

Mathematics and Its History John Stillwell, 2013-06-29 One of the disappointments experienced by most mathematics students is that they never get a course in mathematics They get courses in calculus algebra topology and so on but the division of labor in teaching seems to prevent these different topics from being combined into a whole In fact some of the most important and natural questions are stifled because they fall on the wrong side of topic boundary lines Algebraists do not discuss the fundamental theorem of algebra because that s analysis and analysts do not discuss Riemann surfaces because that s topology for example Thus if students are to feel they really know mathematics by the time they graduate there is a need to unify the subject This book aims to give a unified view of undergraduate mathematics by approaching the subject through its history Since readers should have had some mathematical experience certain basics are assumed and the mathematics is not developed as formally as in a standard text On the other hand the mathematics is pursued more thoroughly than in most general histories of mathematics as mathematics is our main goal and history only the means of approaching it Readers are assumed to know basic calculus algebra and geometry to understand the language of set theory and to have met some more advanced topics such as group theory topology and differential equations [American Book Publishing Record](#) ,1977-03-31 Here s quick access to more than 490 000 titles published from 1970 to 1984 arranged in Dewey sequence with sections for Adult and Juvenile Fiction Author and Title indexes are included and a Subject Guide correlates primary subjects with Dewey and LC classification numbers These cumulative records are available in three separate sets
