Principles of Chemical Kinetics James E. House, 2007-08-30 James House's revised Principles of Chemical Kinetics provides a clear and logical description of chemical kinetics in a manner unlike any other book of its kind. Clearly written with detailed derivations, the text allows students to move rapidly from theoretical concepts of rates of reaction to concrete applications. Unlike other texts, House presents a balanced treatment of kinetic reactions in gas solution and solid states. The entire text has been revised and includes many new sections and an additional chapter on applications of kinetics. The topics covered include quantitative relationships between molecular structure and chemical activity, organic inorganic chemistry, biochemical kinetics, surface kinetics, and reaction mechanisms. Chapters also include new problems with answers to selected questions to test the reader's understanding of each area. A solutions manual with answers to all questions is available for instructors. A useful text for both students and interested readers alike. Dr. House has once again written a comprehensive text simply explaining an otherwise complicated subject. Provides an introduction to all the major areas of kinetics and demonstrates the use of these concepts in real life applications. Detailed derivations of formula are shown to help students with a limited background in mathematics. Presents a balanced treatment of kinetics of reactions in gas phase solutions and solids. Solutions manual available for instructors.
