Selected Papers Ii Springer Collected Works In Mathematics:

Mathematician And His Mathematical Work, A: Selected Papers Of S S Chern Shiu-yuen Cheng, Shiing-shen Chern, P Li, Gang Tian, 1996-09-07 This volume is about the life and work of Shiing Shen Chern 1911 one of the leading mathematicians of this century The book contains personal accounts by some friends together with a summary of the mathematical works by Chern himself Besides a selection of the mathematical papers the book also contains all his papers published after 1988

Peter Lax, Mathematician Reuben Hersch, 2014-12-29 This book is a biography of one of the most famous and influential living mathematicians Peter Lax He is virtually unique as a preeminent leader in both pure and applied mathematics fields which are often seen as competing and incompatible Although he has been an academic for all of his adult life his biography is not without drama and tragedy Lax and his family barely escaped to the U S from Budapest before the Holocaust descended He was one of the youngest scientists to work on the Manhattan Project He played a leading role in coping with the infamous kidnapping of the NYU mathematics department's computer in 1970 The list of topics in which Lax made fundamental and long lasting contributions is remarkable scattering theory solitons shock waves and even classical analysis to name a few His work has been honored many times including the Abel Prize in 2005 The book concludes with an account of his most important mathematical contributions made accessible without heavy prerequisites Reuben Hersch has written extensively on mathematics His book with Philip Davis The Mathematical Experience won the National Book Award in science Hersch is emeritus professor of mathematics at the University of New Mexico

Selected Papers David Mumford, 2014-09-05 Mumford is a well known mathematician and winner of the Fields Medal the highest honor available in mathematics Many of these papers are currently unavailable and the correspondence with Grothendieck has never before been published

Wolf Prize in Mathematics Shiing-Shen Chern, Friedrich Hirzebruch, 2000 This invaluable book features bibliographies important papers and speeches for example at international congresses of Wolf Prize winners This is the first time that lectures by some Wolf Prize winners have been published together Since the work of the Wolf laureates covers a wide spectrum much of the mathematics of the twentieth century comes to life in this book

Development Of Mathematics Between The World Wars, The: Case Studies, Examples And Analyses Martina Bercarova, 2021-05-14 The Development of Mathematics Between the World Wars traces the transformation of scientific life within mathematical communities during the interwar period in Central and Eastern Europe specifically in Germany Russia Poland Hungary and Czechoslovakia Throughout the book in depth mathematical analyses and examples are included for the benefit of the reader World War I heavily affected academic life In European countries many talented researchers and students were killed in action and scientific activities were halted to resume only in the postwar years However this inhibition turned out to be a catalyst for the birth of a new generation of mathematicians for the emergence of new ideas and theories and for the surprising creation of new and outstanding scientific schools The final four chapters are not restricted to

Central and Eastern Europe and deal with the development of mathematics between World War I and World War II After describing the general state of mathematics at the end of the 19th century and the first third of the 20th century three case studies dealing with selected mathematical disciplines are presented set theory potential theory combinatorics in a way accessible to a broad audience of mathematicians as well as historians of mathematics [Milnor?Witt Motives](#) Tom Bachmann,Baptiste CalmŠs,Fr,d,ric D,glise,Jean Fasel,Paul Arne ?stv'r,2025-08-01 View the abstract **The Bulletin of Mathematics Books**,1992 [Numerical Methods for Conservation Laws](#) Jan S. Hesthaven,2018-01-30 Conservation laws are the mathematical expression of the principles of conservation and provide effective and accurate predictive models of our physical world Although intense research activity during the last decades has led to substantial advances in the development of powerful computational methods for conservation laws their solution remains a challenge and many questions are left open thus it is an active and fruitful area of research Numerical Methods for Conservation Laws From Analysis to Algorithms offers the first comprehensive introduction to modern computational methods and their analysis for hyperbolic conservation laws building on intense research activities for more than four decades of development discusses classic results on monotone and finite difference finite volume schemes but emphasizes the successful development of high order accurate methods for hyperbolic conservation laws addresses modern concepts of TVD and entropy stability strongly stable Runge Kutta schemes and limiter based methods before discussing essentially nonoscillatory schemes discontinuous Galerkin methods and spectral methods explores algorithmic aspects of these methods emphasizing one and two dimensional problems and the development and analysis of an extensive range of methods includes MATLAB software with which all main methods and computational results in the book can be reproduced and demonstrates the performance of many methods on a set of benchmark problems to allow direct comparisons Code and other supplemental material will be available online at publication *Teaching Mathematics Through Games* Mindy Capaldi,2021-05-18 Active engagement is the key to learning You want your students doing something that stimulates them to ask questions and creates a need to know Teaching Mathematics Through Games presents a variety of classroom tested exercises and activities that provoke the active learning and curiosity that you hope to promote These games run the gamut from well known favorites like SET and Settlers of Catan to original games involving simulating structural inequality in New York or playing Battleship with functions The book contains activities suitable for a wide variety of college mathematics courses including general education courses math for elementary education probability calculus linear algebra history of math and proof based mathematics Some chapter activities are short term such as a drop in lesson for a day and some are longer including semester long projects All have been tested refined and include extensive implementation notes [Series and Products in the Development of Mathematics: Volume 2](#) Ranjan Roy,2021-03-18 This is the second volume of a two volume work that traces the development of series and products from 1380 to 2000 by presenting and explaining the interconnected concepts and results of hundreds of unsung as well as celebrated mathematicians Some

chapters deal with the work of primarily one mathematician on a pivotal topic and other chapters chronicle the progress over time of a given topic This updated second edition of *Sources in the Development of Mathematics* adds extensive context detail and primary source material with many sections rewritten to more clearly reveal the significance of key developments and arguments Volume 1 accessible even to advanced undergraduate students discusses the development of the methods in series and products that do not employ complex analytic methods or sophisticated machinery Volume 2 examines more recent results including deBranges resolution of Bieberbach's conjecture and Nevanlinna's theory of meromorphic functions
