The Universe Within Neil Shubin, 2013-01-08 In The Universe Within Neil Shubin one of the world s leading

experts reveals to us the extraordinary cosmic and evolutionary adventure of our own bodies During the past 13.7 billion years or so since the Big Bang our universe has evolved stars have formed and died and our planet congealed from the matter in space For aeons the earth has circled the sun while mountains seas and entire continents have come and gone Against this epic backdrop humanity's place in the cosmos can look tiny and insignificant But as Neil Shubin shows in this revelatory new book the one place where universe solar system and planet merge is inside your body Shubin shows how the origin of the Moon is tied to our internal body clocks how the vast amounts of water on Earth and inside all living creatures crossed the deepest stretches of space to us how strange fluctuations in the orbits within our solar system have led to our irregular ice ages and how tiny imbalances in the chaos immediately after the Big Bang can explain why matter exists at all Delving below the earth's surface and into the frozen Arctic exploring the smallest atomic structures and the vast reaches of space Neil Shubin uncovers a sublimely beautiful almost magical truth that in every one of us lies the most profound story of all how we and our world came to be Shubin is not only a distinguished scientist but a wonderfully lucid and elegant writer he is an irrepressibly enthusiastic teacher a science writer of the first rank Oliver Sacks Neil Shubin is a palaeontologist in the great tradition of his mentors Ernst Mayr and Stephen Jay Gould He has discovered fossils around the world that have changed the way we think about many of the key transitions in evolution and has pioneered a new synthesis of expeditionary palaeontology developmental genetics and genomics He trained at Columbia Harvard and Berkeley and is currently a Professor in the Department of Organismal Biology and Anatomy at the University of Chicago His previous book is *Your Inner Fish* The amazing discovery of our 375 million year old ancestor

A New History of Life Peter Ward, Joe

Kirschvink, 2015-04-14 An estimated 4.6 billion years ago the Earth and Moon were formed in a violent impact On this many agree and even more that a long time after that life began However few know that the first life on the Earth may not have emerged on this planet but could in fact have begun on Mars brought here by meteorites In this revolutionary book leading scientists Peter Ward and Joe Kirschvink rewrite the principal account of the history of life on Earth They show not only how the rise of animals was delayed for billions of years but also what it was that first forced fish out of the sea and onto the land Together the two scientists explain how developments in the environment led to multiple Ice Ages before the emergence of dinosaurs and other giant animals and what the true cause of these great beasts' eventual extinction was Finally charting the course of our own evolution they explore whether this generation will see the end of the human species *A New History of Life* proves not only that much of what we think we know should be unlearned but also that the true history of life on Earth is much more surprising and wonderful than we could ever have imagined

Oxygen and the Evolution of Life Heinz Decker,Kensal E van Holde,2010-12-03 This book describes the interlaced histories of life and oxygen It opens with the generation of oxygen in ancient stars and its distribution to newly formed planets like the Earth Free O₂ was not available on the early Earth so the first life forms had to be anaerobic Life introduced free O₂ into the environment through the evolution of photosynthesis which must have been a disaster for many anaerobes Others found ways to deal with the toxic reactive oxygen species and even developed a much more efficient oxygen based metabolism The authors vividly describe how the introduction of O₂ allowed the burst of evolution that created today s biota They also discuss the interplay of O₂ and CO₂ with consequences such as worldwide glaciations and global warming On the physiological level they present an overview of oxidative metabolism and O₂ transport and the importance of O₂ in human life and medicine emphasizing that while oxygen is essential it is also related to aging and many disease states
