## **Our Planets Ourselves:**

**Attack on Planet Falrus** J N. Tenkorang, 2010-02 Falrus is a small planet in the First Galaxy far away from Earth. This idyllic world is separated from the darker and little understood half of the First Galaxy by Line Desimak, an imaginary line similar to Earth's equator. Giren and Gomi Demba are twins with different personalities; they consider themselves friendly enemies. Their science prodigy friend Square builds a robot named Professor Potty who proves to be far more than an intelligent toy. The President and Commander Bonzok from the OLD World Outside Line Desimak decide it's time Falrus comes under their rule. These tyrants will stop at nothing to take over the entire galaxy. The twins Square and Professor Potty must devise a plan to stop them. But a sequence of events will put one of the twins smack dab in the middle of a very dangerous situation. Can Falrus be saved from the evil clutches of two powerful leaders who want the First Galaxy all to themselves? With the school year drawing to a close, these adventurous friends, with the help of a dancing robot, intend to keep Falrus the way it's always been and just maybe make some out of their world friends along the way. J N Tenkorang writes a thrilling fantasy filled with fun and adventure where young protagonists take on very powerful nemeses. Fans of the genre will eagerly anticipate the sequel to this stellar debut novel. Tenkorang is an author and physician living in London who is writing the sequel to **Attack on Planet Falrus**.

**Into Self...out of Self** Tess Marcin, **The Little Book of Stars** James B. Kaler, 2013-11-01 The Little Book of Stars tells the story of stellar science and what the stars mean to us from a variety of perspectives. Beginning with the big picture, the book moves through progressively more and more intimate views until we feel we can hold the stars in our hands from which we can then throw them back to the sky to see our place among them. The book opens with a summary of the event that created our Universe, the Big Bang, and then goes on to describe the natures of the Big Bang's progeny, the stars: what they are, how they shine, and how they can live such immensely long lives. Approaching home, it next examines the measures of the stars: where they are, how they are collected together from pairs to galaxies of billions, and how we learn of their individual properties. Yet closer we look in depth at the Sun and at the physical differences among the stars at the immense range of properties they possess. Finally, arriving at Earth, we see the significance of the stars to human life: how we have used them to tell our stories and to find where we are in both space and time. From this base, the book looks more closely at stellar details, concentrating on temporal phenomena, on stellar change, and on the observational base that helps set the stage for the theory that links them all together.
