
RHCE Exam Revision Questions with Revised Answers

How to make sure "copy" module does not override present files? - Answer-Module "copy" assumes "force: yes" parameter by default, which means that if the file exists, copy will overwrite it regardless of its contents. Parameter "force: no" will only copy the file from source to destination if no file of that name exists in the destination.

What is the "stat" module for? - Answer>Returns a hash dictionary of values containing the file status data, which allows you to refer to individual pieces of information using separate variables.

What is Jinja2? - Answer-Ansible uses the Jinja2 templating system for template files. Ansible also uses Jinja2 syntax to reference variables in playbooks.

Jinja2 usage and syntax - Answer-Jinja2 templates can be used with "template" module to deploy files tailored to the managed host based on the template.

Syntax:

```
{# COMMENT #}  
{% VARIABLE %}  
{% EXPRESSION %} - e.g:  
1. for loops: {% for i in list %} {{ variable }} {% endfor %}  
2. if statements: {% if condition %} {{ variable }} {% endif %}
```

Basic host pattern rules in Ansible - Answer-Wildcard "*" can be used to match hosts by pattern. Any pattern using wildcard will be allowed for hostnames that are included in the inventory file. Character "!" before a hostname or group excludes this group. We can create complex patterns, e.g.: "!group1, group".

Including and Importing files - how to and what is the difference - Answer-Ansible allows for combining multiple playbooks into a main playbook modularly, or inserting lists of tasks from a file into a play. There are two operations that Ansible can use to bring content into a playbook. You can include content, or you can import content.

Include - dynamic operation, ansible processes it during the run of the playbook, as content is reached

Import - static operation, ansible preprocesses imported content when the playbook is initially parsed, before the run starts
