Telling the Evolutionary Time Philip C J Donoghue, M. Paul Smith, 2003-12-16 Determining the precise timing for the evolutionary origin of groups of organisms has become increasingly important as scientists from diverse disciplines attempt to examine rates of anatomical or molecular evolution and correlate intrinsic biological events to extrinsic environmental events Molecular clock analyses indicate that many major groups

Perspectives on an Evolving Creation Keith B. Miller, 2003-09-25 According to the authors of this book who explore evolutionary theory from a clear Christian perspective the common view of conflict between evolutionary theory and Christian faith is mistaken Written by contributors representing the natural sciences philosophy theology and the history of science this thought provoking work is informed by both solid scientific knowledge and keen theological insight The three sections of the book address 1 relevant biblical historical and scientific background 2 the scientific evidence for an evolving creation and 3 theological issues commonly raised in connection with evolution including the nature of God's creative activity the meaning of the miraculous and the uniqueness of humankind Woven through the volume are short meditations designed to direct readers toward worshipping the God of providence Contributors Laurie J Braaten Warren S Brown Jr David Campbell Robin Collins Edward B Davis Terry M Gray Jeffrey K Greenberg Deborah B Haarsma Loren Haarsma James P Hurd Conrad Hyers David N Livingstone Keith B Miller John C Munday Jr George L Murphy Mark A Noll Robert John Russell Howard J Van Till David L Wilcox Jennifer Wiseman

Mammalian Evolution, Diversity and Systematics Frank Zachos, Robert Asher, 2018-10-22 There are nearly 6 000 mammalian species among them our own Research on our evolutionary cousins has a long history but the last 20 years have seen particularly rapid progress in disentangling the interrelationships and evolutionary history of mammals The present volume combines up to date reviews on mammalian phylogenetics with paleontological taxonomic and evolutionary chapters and also summarizes the historical development of our insights in mammalian relationships and thus our own place in the Tree of Life Our book places the present biodiversity crisis in context with one in four mammal species threatened by extinction and reviews the distribution and conservation of mammalian diversity across the globe This volume is the introductory tome to the new Mammalia series of the Handbook of Zoology and will be essential reading for mammalogists zoologists and conservationists alike

Classification, Evolution, and the Nature of Biology Alec L. Panchen, 1992-06-26

Historically naturalists who proposed theories of evolution including Darwin and Wallace did so in order to explain the apparent relationship of natural classification This book begins by exploring the intimate historical relationship between patterns of classification and patterns of phylogeny However it is a circular argument to use the data for classification Alec Panchen presents other evidence for evolution in the form of a historically based but rigorously logical argument This is followed by a history of methods of classification and phylogeny reconstruction including current mathematical and molecular techniques The author makes the important claim that if the hierarchical pattern of classification is a real phenomenon then biology is unique as a science in making taxonomic statements This conclusion is reached by way of historical reviews of theories of evolutionary mechanism and the philosophy of science as applied to biology The book is addressed to biologists particularly taxonomists concerned with the history and philosophy of their subject and to philosophers of science concerned with biology It is also an important source book on methods of classification and the logic of evolutionary theory for students professional biologists and paleontologists
