Building DMZs For Enterprise Networks Syngress, 2003-08-04 This book covers what an administrator needs to plan out and integrate a DMZ into a network for small medium and Enterprise networks In most enterprises the perception is that a

firewall provides a hardened perimeter. However, the security of internal networks and hosts is usually very soft. In such an environment, a non-DMZ system that is offering services to the Internet creates the opportunity to leapfrog to other hosts in the soft interior of your network. In this scenario, your internal network is fair game for any attacker who manages to penetrate your so-called hard perimeter. There are currently no books written specifically on DMZs. This book will be unique in that it will be the only book that teaches readers how to build a DMZ using all of these products: ISA Server, Check Point, NG Cisco Routers, Sun Servers, and Nokia Security Appliances. Dr. Thomas W. Shinder is the author of the best-selling book on Microsoft's ISA, *Configuring ISA Server 2000*. Customers of the first book will certainly buy this book. **Critical**

Information Infrastructures Maitland Hyslop, 2007-09-05. Resilience is an increasingly important concept and quality in today's world. It is particularly important in the area of Critical Infrastructures. It is crucial in the area of Critical Information Infrastructure. This is because since the year 2000, man has been dependent on information and telecommunications systems for survival, particularly in the Organization for Economic Cooperation and Development (OECD) countries, and because all other Critical Infrastructures depend upon to a greater or lesser extent. Critical Information Infrastructure. Until probably the late 1980s, it would be fair to say that the defense of individual nation states depended upon a mixture of political will and armed might. The fall of the Berlin Wall may have effectively ended the Cold War and with it a bipolar world, but it brought globalization and a multipolar digital world in its wake. Simply put, a number of power vacuums were created and these have yet to be fully filled and settled. In this New World, many changes were afoot. These changes include the increasing irrelevance of nation states in federated structures and the export of democracy on the back of globalization. One of the biggest changes though is the use of digital technology by the OECD countries. This is on such a scale that these countries have become both dependent upon information technology and as individual states largely irrelevant to the new global electronic economy. This adaptation of Maslow's hierarchy of needs is attributed to KPMG.
