Wave Turbulence Sergey Nazarenko, 2011-02-12 Wave Turbulence refers to the statistical theory of weakly nonlinear dispersive waves There is a wide and growing spectrum of physical applications ranging from sea waves to plasma waves to superfluid turbulence to nonlinear optics and Bose Einstein condensates Beyond the fundamentals the book thus also covers new developments such as the interaction of random waves with coherent structures vortices solitons wave breaks inverse cascades leading to condensation and the transitions between weak and strong turbulence turbulence intermittency as well as finite system size effects such as frozen turbulence discrete wave resonances and avalanche type energy cascades This book is an outgrow of several lectures courses held by the author and as a result written and structured rather as a graduate text than a monograph with many exercises and solutions offered along the way The present compact description primarily addresses students and non specialist researchers wishing to enter and work in this field

The Maximal Subgroups of the Low-Dimensional Finite Classical Groups John N. Bray, Derek F. Holt, Colva M. Roney-Dougal, 2013-07-25 Classifies the maximal subgroups of the finite groups of Lie type up to dimension 12 using theoretical and computational methods

Automorphic Forms and Galois Representations Fred Diamond, Payman L. Kassaei, Minhyong Kim, 2014-10-16 Part two of a two volume collection exploring recent developments in number theory related to automorphic forms and Galois representations

Automorphic Forms and Galois Representations: Volume 2 Fred Diamond, Payman L. Kassaei, Minhyong Kim, 2014-10-16 Automorphic forms and Galois representations have played a central role in the development of modern number theory with the former coming to prominence via the celebrated Langlands program and Wiles proof of Fermat s Last Theorem This two volume collection arose from the 94th LMS EPSRC Durham Symposium on Automorphic Forms and Galois Representations in July 2011 the aim of which was to explore recent developments in this area The expository articles and research papers

across the two volumes reflect recent interest in p -adic methods in number theory and representation theory as well as recent progress on topics from anabelian geometry to p -adic Hodge theory and the Langlands program. The topics covered in volume two include curves and vector bundles in p -adic Hodge theory, associators, Shimura varieties, the birational section conjecture and other topics of contemporary interest.

Surveys in Combinatorics 2019 Allan Lo, Richard Mycroft, Guillem Perarnau, Andrew Treglown, 2019-06-27 Eight articles provide a valuable survey of the present state of knowledge in combinatorics.
