Nondetects and Data Analysis Dennis R. Helsel, 2005 STATISTICS IN PRACTICE Statistical methods for interpreting and analyzing censored environmental data Nondetects And Data Analysis Statistics for Censored Environmental Data provides solutions for environmental scientists and professionals who need to interpret and analyze data that fall below the laboratory detection limit Adapting survival analysis methods that have been successfully used in medical and industrial research the author demonstrates for the first time their practical applications for studies of trace chemicals in air water soils and biota Readers quickly become proficient in these methods through the use of real world examples that are solved using MINITAB Release 14 a popular statistical software package as well as other commonly used software packages Everything needed to master these innovative statistical methods is provided including Accompanying Web site featuring answers to book exercises and datasets as well as MINITAB macros to perform methods which are not available in the commercial version Methods for data with multiple detection limits Solutions for research studies in which all data are below detection limits Techniques for constructing confidence prediction and tolerance intervals for data with nondetects Methods for data with multiple detection limits Chapters are organized by objective such as computing intervals comparing groups and correlations which enables readers to more easily apply the text to their particular research and goals Extensive references to the literature for more in depth research are provided however the text itself avoids complex math and calculus making it accessible to anyone in the environmental sciences Environmental scientists and professionals will find the hands on guidance and practical examples invaluable

Statistical Data Analysis Explained Clemens Reimann, Peter Filzmoser, Robert Garrett, Rudolf Dutter, 2011-08-31 Few books on statistical data analysis in the natural sciences are written at a level that a non statistician will easily understand This is a book written in colloquial language avoiding mathematical formulae as much as possible trying to explain statistical methods using examples and graphics instead To use the book efficiently readers should have some computer experience The book starts with the simplest of statistical concepts and carries readers forward to a deeper and more extensive understanding of the use of statistics in environmental sciences The book concerns the application of statistical and other computer methods to the management analysis and display of spatial data These data are characterised by including locations geographic coordinates which leads to the necessity of using maps to display the data and the results of the statistical methods Although the book uses examples from applied geochemistry and a large geochemical survey in particular the principles and ideas equally well apply to other natural sciences e g environmental sciences pedology hydrology geography forestry ecology and health sciences epidemiology The book is unique because it supplies direct access to software solutions based on R the Open Source version of the S language for statistics for applied environmental statistics For all graphics and tables presented in the book the R scripts are provided in the form of executable R scripts In addition a graphical user interface for R called DAS R was developed for convenient fast and interactive data
