Semiconductor Nanostructures Jagdeep Shah, 2013-11-11 **Ultrafast Phenomena in Semiconductors** Kong-Thon Tsen, 2012-12-06 There are many books in the market devoted to the review of certain fields This book is different from those in that authors not only provide reviews of the fields but also present their own important contributions to the fields in a

tutorial way As a result researchers who are already in the field of ultrafast dynamics in semiconductors and its device applications as well as researchers and graduate students just entering the field will benefit from it This book is made up of recent new developments in the field of ultrafast dynamics in semiconductors It consists of nine chapters Chapter 1 reviews a microscopic many body theory which allows one to compute the linear and non linear optical properties of semiconductor superlattices in the presence of homogeneous electric fields Chapter 2 deals with ultrafast intersubband dynamics in quantum wells and device structures Chapter 3 is devoted to Bloch oscillations in semiconductors and their applications Chapter 4 discusses transient electron transport phenomena such as electron ballistic transport and electron velocity overshoot phenomena as well as non equilibrium phonon dynamics in nanostructure semiconductors Chapter 5 reviews experimental and theoretical work on the use of the phase properties of one or more ultrashort optical pulses to generate and control electrical currents in semiconductors

Selective Photonic Disinfection Shaw-Wei D Tsen, Kong-Thon Tsen, 2016-07-01 Pathogens such as viruses and bacteria are among the greatest threats to human health worldwide In today's era of population growth and international travel new technologies are desperately needed to combat the spread of known and emerging pathogens This book presents a new concept for pathogen inactivation called selective photonic disinfection SEPHODIS The SEPHODIS technology inactivates pathogens by mechanical means a total paradigm shift from traditional chemical and physical methods The unique strength of SEPHODIS resides in its capability to inactivate pathogens while preserving desirable materials such as human cells and proteins The technology also avoids the need to use chemicals drastically reducing the risk of side effects These properties make SEPHODIS ideal for important biomedical applications such as safeguarding blood products and therapeutics against pathogens as well as producing effective and safe vaccines to combat infectious disease Written in a style that is both technically informative and easy to comprehend for the layman reader this book illustrates the story of SEPHODIS from its initial discovery and bench studies to its real world applications

Nanoplasmonics Grégory Barbillon, 2017-06-21 Nanoplasmonics is a young topic of research which is part of nanophotonics and nano optics Nanoplasmonics concerns to the investigation of electron oscillations in metallic nanostructures and nanoparticles Surface plasmons have optical properties which are very interesting For instance surface plasmons have the unique capacity to confine light at the nanoscale Moreover surface plasmons are very sensitive to the surrounding medium and the properties of the materials on which they propagate In addition to the above the surface plasmon resonances can be controlled by adjusting the size shape periodicity and materials nature All these optical properties can enable a great number of applications such as biosensors optical modulators photodetectors and photovoltaic devices This book is intended for a broad audience and provides an overview of some of the fundamental knowledges and

applications of nanoplasmonics
