Nonlinear Signal Processing A Statistical Approach:

Nonlinear Signal Processing Gonzalo R. Arce, 2004-12-20 Nonlinear Signal Processing A Statistical Approach focuses on unifying the study of a broad and important class of nonlinear signal processing algorithms which emerge from statistical estimation principles and where the underlying signals are non Gaussian rather than Gaussian processes Notably by concentrating on just two non Gaussian models a large set of tools is developed that encompass a large portion of the nonlinear signal processing tools proposed in the literature over the past several decades Key features include Numerous problems at the end of each chapter to aid development and understanding Examples and case studies provided throughout the book in a wide range of applications bring the text to life and place the theory into context A set of 60 MATLAB software m files allowing the reader to quickly design and apply any of the nonlinear signal processing algorithms described in the book to an application of interest is available on the accompanying FTP site

Adaptive Learning Methods for Nonlinear System Modeling Danilo Comminiello, Jose C. Principe, 2018-06-11 Adaptive Learning Methods for Nonlinear System Modeling presents some of the recent advances on adaptive algorithms and machine learning methods designed for nonlinear system modeling and identification Real life problems always entail a certain degree of nonlinearity which makes linear models a non optimal choice This book mainly focuses on those methodologies for nonlinear modeling that involve any adaptive learning approaches to process data coming from an unknown nonlinear system By learning from available data such methods aim at estimating the nonlinearity introduced by the unknown system In particular the methods presented in this book are based on online learning approaches which process the data example by example and allow to model even complex nonlinearities e g showing time varying and dynamic behaviors Possible fields of applications of such

algorithms includes distributed sensor networks wireless communications channel identification predictive maintenance wind prediction network security vehicular networks active noise control information forensics and security tracking control in mobile robots power systems and nonlinear modeling in big data among many others This book serves as a crucial resource for researchers PhD and post graduate students working in the areas of machine learning signal processing adaptive filtering nonlinear control system identification cooperative systems computational intelligence This book may be also of interest to the industry market and practitioners working with a wide variety of nonlinear systems Presents the key trends and future perspectives in the field of nonlinear signal processing and adaptive learning Introduces novel solutions and improvements over the state of the art methods in the very exciting area of online and adaptive nonlinear identification Helps readers understand important methods that are effective in nonlinear system modelling suggesting the right methodology to address particular issues

Circuits and Systems Tutorials Chris Toumazou, Nick Battersby, Sonia Porta, 1995-12-11 Available for the first time in paperback this ground breaking industry textbook is heralded as a first in its state of the art coverage of the most important areas emerging in circuits and systems It is compiled from course material used in a suite of one day tutorials on circuits and systems designed expressly for engineers and research scientists who want to explore subjects outside but related to their immediate fields Authored by 50 circuits and systems experts this volume fosters a fundamental and authoritative understanding of each subject

Passive, Active, and Digital Filters Wai-Kai Chen, 2018-10-08 Upon its initial publication The Circuits and Filters Handbook broke new ground It quickly became the resource for comprehensive coverage of issues and practical information that can be put to immediate use Not content to rest on his laurels in addition to updating the second edition editor Wai Kai Chen divided it into tightly focused texts that made the information easily accessible and digestible These texts have been revised updated and expanded so that they continue to provide solid coverage of standard practices and enlightened perspectives on new and emerging techniques Passive Active and Digital Filters provides an introduction to the characteristics of analog filters and a review of the design process and the tasks that need to be undertaken to translate a set of filter specifications into a working prototype Highlights include discussions of the passive cascade synthesis and the synthesis of LCM and RC one port networks a summary of two port synthesis by ladder development a comparison of the cascade approach the multiple loop feedback topology and ladder simulations an examination of four types of finite wordlength effects and coverage of methods for designing two dimensional finite extent impulse response FIR discrete time filters The book includes coverage of the basic building blocks involved in low and high order filters limitations and practical design considerations and a brief discussion of low voltage circuit design Revised Chapters Sensitivity and Selectivity Switched Capacitor Filters FIR Filters IIR Filters VLSI Implementation of Digital Filters Two Dimensional FIR Filters Additional Chapters 1 D Multirate Filter Banks Directional Filter Banks Nonlinear Filtering Using Statistical Signal Models Nonlinear Filtering for Image Denoising Video Demosaicking Filters This volume will
