finds a new way of approaching Jung's understanding of concepts such as visionary works and visionary mind and considers how this approach can enhance our vision of depth psychology. Through various thematics such as the metanoia and the symbolism of animals as well as the transformative role of the feminine and the erotic and spiritual imagery of the soul, this work revolves around the Jung-Dante correlation. Offering an original perspective within the field of Jungian and Dante scholarship, this book will be of great interest to academics and postgraduate students studying in the areas of Jung-Dante analytical psychology, depth psychology, hermeneutics, and Western esoteric currents and practices. The book will also appeal to Jungian analysts and psychoanalysts more broadly.

Het creatieve genie Pieter J. van Strien, 2016-01-27 Antibiotica de pil de Mona Lisa de pc hoe komen dergelijke geniale scheppingen of vondsten tot stand? Zijn ze het werk van een genie en zo ja, wat kenmerkt zo'n genie? Over geniale wetenschappers en kunstenaars bestaan allerlei mythes: een torenhoog IQ, een moeilijke jeugd, egocentrisme. Psycholoog Pieter van Strien brengt deze mythes in kaart en prikt ze door. Na het goed ontvangen *Psychologie van de wetenschap* 2011 richt Pieter J. van Strien zich in *Het creatieve genie* op de persoon achter het eerder door hem beschreven creatieve proces. En hij neemt nu naast wetenschappers ook technici en kunstenaars in beschouwing.

Rebooting AI Gary Marcus, Ernest Davis, 2019-09-10 Two leaders in the field offer a compelling analysis of the current state of the art and reveal the steps we must take to achieve a robust artificial intelligence that can make our lives better. Finally, a book that tells us what AI is, what AI is not, and what AI could become if only we are ambitious and creative enough. Garry Kasparov, former world chess champion and author of *Deep Thinking*. Despite the hype surrounding AI, creating an intelligence that rivals or exceeds human levels is far more complicated than we have been led to believe. Professors Gary Marcus and Ernest Davis have spent their careers at the forefront of AI research and have witnessed some of the greatest milestones in the field, but they argue that a computer beating a human in Jeopardy does not signal that we are on the doorstep of fully autonomous cars or superintelligent machines. The achievements in the field thus far have occurred in closed systems with fixed sets of rules, and these approaches are too narrow to achieve genuine intelligence. The real world, in contrast, is wildly complex and open-ended. How can we bridge this gap? What will the consequences be when we do? Taking inspiration from the human mind, Marcus and Davis explain what we need to advance AI to the next level and suggest that if we are wise along the way, we won't need to worry about a future of machine overlords. If we focus on endowing machines with common sense and deep understanding rather than simply focusing on statistical analysis and gathering ever larger collections of data, we will be able to create an AI we can trust in our homes, our cars, and our doctors' offices. *Rebooting AI* provides a lucid, clear-eyed assessment of the current science and offers an inspiring vision of how a new generation of AI can make our lives better.
