Oilseeds Genome Mapping And Molecular Breeding In Plants:

Oilseeds Chittaranjan Kole, 2007-05-05 Genome Mapping and Molecular Breeding in Plants presents the current status of the elucidation and improvement of plant genomes of economic interest. The focus is on genetic and physical mapping, positioning, cloning, monitoring of desirable genes by molecular breeding and the most recent advances in genomics. The series comprises seven volumes: Cereals and Millets, Oilseeds, Pulses, Sugar and Tuber Crops, Fruits and Nuts, Vegetables, Technical Crops, and Forest Trees. Oilseeds is devoted to oil-producing field crops such as soybeans, oilseed rape, peanuts, sunflowers, Indian mustard, Brassica rapa, black mustard, and flax. While the grouping of economic plants is conventionally based on their agricultural purposes, several crops covered in this volume have other uses besides yielding oils. Brassica rapa is also used as a vegetable, the sunflower as an ornamental, and flax as a fibre crop. Black mustard, which is used as a condiment but is genetically close to other Brassica species, is also included here.

Genome Mapping and Molecular Breeding in Plants: Oilseeds, 2006 *Genome Mapping and Molecular Breeding in Plants Oilseeds Vol. 2, 3, 4 & 5* Kole Chittranjan, 2007 *Oil Crops* Johann Vollmann, Istvan Rajcan, 2009-09-18

When one is privileged to participate long enough in a professional capacity, certain trends may be observed in the dynamics of how challenges are met or how problems are solved. Agricultural research is no exception in view of how the plant sciences have moved forward in the past 30 years. For example, the once grand but now nearly forgotten art of whole plant physiology has given way almost completely to the more sophisticated realm of molecular biology. What once was the American Society of Plant Physiologists is now the American Society of Plant Molecular Biology, a democratic decision to indemnify efforts to go beyond the limits of the classical science and actually begin to understand the underlying biological basis for genetic regulation of metabolic mechanisms in plants. Yet as new technologies open windows of light on the inner workings of biological processes, one might reminisce with faint nostalgia on days long past when the artisans of plant physiology, biochemistry, analytical chemistry, and other scientific disciplines ebbed and waned in prominence. No intentional reference is made here regarding Darwinism; the plant sciences always have been extremely competitive. Technology is pivotal. Those who develop and/or implement innovative concepts typically are regarded as leaders in their respective fields. Each positive incremental step helps bring recognition and the impetus to push a scientific discipline forward with timely approaches to address relevant opportunities.

Genetics, Genomics and Breeding of Oilseed Brassicas Dave Edwards, Jacqueline Batley, Isobel Parkin, Chittaranjan Kole, 2011-09-13. The book describes the history of Brassica oilseed crops, introduces the Brassica genome, its evolution, diversity, classical genetic studies, and breeding. It also delves into molecular genetic linkage and physical maps, progress with genome sequencing initiatives, mutagenesis approaches for trait improvement, proteomics, metabolomics, and bioinformatics.

Oilseeds Chittaranjan Kole, 2006-11-07. Part of the seven-volume series *Genome Mapping and Molecular Breeding in Plants*, the volume *Oilseeds* is devoted to oil-producing field crops such as soybeans, oilseed rape, peanuts, sunflowers, Indian mustard, Brassica rapa, black

mustard and flax While the grouping of economic plants is conventionally based on their agricultural purposes several crops covered in this volume have other uses besides yielding oils Brassica rapa is also used as a vegetable the sunflower as an ornamental and flax as a fibre crop Black mustard which is used as a condiment but is genetically close to other Brassica species is also included here

Allele Mining for Genomic Designing of Oilseed Crops Chittaranjan Koley, Manish Kumar Pandey, Naveen Puppala, 2024-09-18 This book deliberates on the concept strategies tools and techniques of allele mining in oilseed crops and its application potential in genome elucidation and improvement including studying allele evolution discovery of superior alleles discerning new haplotypes assessment of intra and interspecific similarity and studies of gene expression and gene prediction Available gene pools in global germplasm collections specifically consisting of wild allied species and local landraces for almost all major crops have facilitated allele mining The development of advanced genomic techniques including PCR based allele priming and Eco TILLING based allele mining is now widely used for mining superior alleles Allele s discovery has become more relevant now for employing molecular breeding to develop designed crop varieties matching consumer needs and with genome plasticity to adapt to climate change scenarios All these concepts and strategies along with precise success stories are presented in the chapters dedicated to the major oilseed crops 1 This is the first book on the novel strategy of allele mining in oilseed crops for precise breeding 2 This book presents genomic strategies for mining superior alleles underlying agronomic traits from genomic resources 3 This book depicts case studies of PCR based allele priming and Eco TILLING based allele mining 4 This book elaborates on gene discovery and gene prediction in major oilseed crops This book will be useful to students and faculties in various plant science disciplines including genetics genomics molecular breeding agronomy and bioinformatics scientists in seed industries and policymakers and funding agencies interested in crop improvement

Industrial Crops Von Mark V. Cruz, David A. Dierig, 2014-11-17 The volume on Industrial Crop Breeding will be part of the series Handbook of Plant Breeding This volume will focus on the emerging area of plant breeding for sustainable production of transportation fuels and bio based products using the current advances in the field The book is scheduled to consist of a total number of 30 chapters divided into four sections The sections will emphasize crops being considered for different challenge areas including oil crops for biodiesel sugar starch and cellulosic crops for biofuel crops for bio products and issues and future prospects A chapter introducing the first three sections will also be included Outstanding scientists for each crop species are proposed as senior authors who may invite co authors to contribute part of a chapter to provide additional expertise or perspective The proposed authors will represent various national and international institutions to get a more diverse view on the topic and somehow get a global view on the common issues that researchers on industrial crops are facing The book will comprise primarily of specific issues available germplasm breeding techniques and potential geographical areas of production pertaining to individual crops being considered for industrial uses We hope to encourage the proposed authors of new crops to provide an estimate of the crop readiness for commercial

development and discuss the limitations This book will be of interest and envisioned to serve as an updated reference to researchers in both academic and industrial setting to students and teachers of plant breeding and to policy makers who are looking for alternative solutions to dependency on imported petroleum products

The Brassica juncea Genome
Chittaranjan Kole, Trilochan Mohapatra, 2022-03-08 This book is the first comprehensive compilation of deliberations on elucidation and augmentation of the genome of Brassica juncea one of the leading oilseed crops of the world popularly called as brown mustard Indian mustard Chinese mustard or Oriental mustard It includes discussions on genepools genetic diversity and its characterization classical genetic and traditional breeding basics and application of heteroploidy techniques and applications of introgressive hybridization in vitro culture for micro propagation somatic mutation somatic embryogenesis and somatic hybridization genetic engineering including genetic transformation and gene silencing and molecular genetic mapping and mapping of genes and comprehensive delineations on genome sequencing and comparative genomics resequencing for elucidation of origin and diversity large scale genome analysis plastid genome sequence transcriptomics metabolomics proteomics evolutionary genomics role of regulatory genes in development and adaptation and their utilization in trait improvement precise breeding for yield quality and resistance to biotic and abiotic stresses and prospects of genome editing

Brassica Germplasm Mohamed A. El-Esawi, 2018-10-24 The genus Brassica L of the family Brassicaceae has a vital role in agriculture and human health The genus comprises several species including major oilseed and vegetable crops with promising agronomic traits Brassica secondary products have antibacterial antioxidant and antiviral effects Characterization of Brassica is important for providing information on domestication propagation and breeding programs as well as conservation of plant genetic resources This book highlights the current knowledge of the genus Brassica L in order to understand its biology diversity conservation and breeding as well as to develop disease resistant and more productive crops This book will be of interest to many readers researchers and scientists who will find this information useful for the advancement of their research towards a better understanding of Brassica breeding programs
