

CRANKING MOTOR

★ All parts of a cranking motor are available for repairs—for instance: In peace times it was customary to replace the complete set of brushes at each overhaul period.

But today with shortage of vital materials it is good wartime practice to replace only if brushes will not last until the next overhaul. Armature shafts

can be straightened in a press and worn bushings may be replaced.

Remember the conservation of materials is vital to victory. Service procedures that are recommended today, while different from those recommended in peace times, are necessary under wartime conditions.

SIMPLE ELECTRICAL CHECK

1 Turn on the lights and, with the ignition on, "STEP ON" the starter:

2 If the lights go out—
This indicates poor connection at the battery or ground.

3 If the lights dim excessively—
This indicates a run-down battery.

4 If the lights stay bright and no cranking motor action takes place—

This indicates open circuit in cranking motor or cranking motor switch control.

5 Solenoid-operated cranking motors may be tested by cutting out solenoid unit. Place a heavy cable across solenoid terminals to see if the cranking motor will operate. This connects cranking motor directly to the battery. If cranking motor operates but does not crank the engine, then the trouble lies in the solenoid unit.

6 Solenoid Unit must be analyzed to trace source of trouble. If repairs cannot be effected, consult your local authorized distributor.

7 If cranking motor does not operate it should be removed for service as follows:
