Oil Spill Dispersants Efficacy And Effects:

Oil Spill Dispersants Committee on Understanding Oil Spill Dispersants: Efficacy and Effects, Ocean Studies Board, 2005 Approximately 3 million gallons of oil or refined petroleum products are spilled into U S waters every year Oil dispersants chemical agents such as surfactants solvents and other compounds are used to reduce the effect of oil spills by changing the chemical and physical properties of the oil By enhancing the amount of oil that physically mixes into the water dispersants can reduce the potential that a surface slick will contaminate shoreline habitats Although called for in the Oil Pollution Act of 1990 as a tool for minimizing the impact of oil spills the use of chemical dispersants has long been controversial This book reviews the adequacy of existing information and ongoing research regarding the effectiveness of dispersants as an oil spill response technique as well as the effect of dispersed oil on marine and coastal ecosystems Oil Spill Dispersants also includes recommended steps for policy makers faced with making hard choices regarding the use of dispersants as part of spill contingency planning efforts or during actual spills **Oil Spill Chemical Dispersants** Tom E. Allen, 1984 **Oil Spill Dispersants** , 2005 **The Use of Dispersants in Marine Oil Spill Response** National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Ocean Studies Board, Committee on the Evaluation of the Use of Chemical Dispersants in Oil Spill Response, 2020-04-24 Whether the result of an oil well blowout vessel collision or grounding leaking pipeline or other incident at sea each marine oil spill will present unique circumstances and challenges The oil type and properties location time of year duration of spill water depth environmental conditions affected biomes potential human community impact and available resources may vary significantly Also each spill may be governed by policy guidelines such as those set forth in the National Response Plan Regional Response Plans or Area Contingency Plans To respond effectively to the specific conditions presented during an oil spill spill responders have used a variety of response options including mechanical recovery of oil using skimmers and booms in situ burning of oil monitored natural attenuation of oil and dispersion of oil by chemical dispersants Because each response method has advantages and disadvantages it is important to understand specific scenarios where a net benefit may be achieved by using a particular tool or combination of tools This report builds on two previous National Research Council reports on dispersant use to provide a current understanding of the state of science and to inform future marine oil spill response operations The response to the 2010 Deepwater Horizon spill included an unprecedented use of dispersants via both surface application and subsea injection The magnitude of the spill stimulated interest and funding for research on oil spill response and dispersant use in particular This study assesses the effects and efficacy of dispersants as an oil spill response tool and evaluates trade offs associated with dispersant use Using Oil Spill Dispersants on the Sea National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Marine Board, Committee on Effectiveness of Oil Spill Dispersants, 1989-01-01 While

major oil spills are rare oil slicks can have disastrous environmental and economic consequences This book summarizes research on the use of chemical dispersants their effectiveness and limitations and the results of using them in different spill situations Based on laboratory and field research as well as on actual case histories this book contains a clear cut set of recommendations for action planning and research Of special interest is the chapter on the biological effects of oil itself and of oil treated with chemical dispersants *Review of the Use of Dispersants in Response to the Deepwater Horizon Oil Spill* United States. Congress. Senate. Committee on Appropriations. Subcommittee on Commerce, Justice, Science, and Related Agencies, 2011

Oil Spill Dispersants Clayton/Payne, 2020-08-26 Oil Spill Dispersants Mechanisms of Action and Laboratory Tests provides a comprehensive summary of current information available regarding the general formulation of commercial dispersants and their function to lower oil water interfacial tension The book considers how chemical dispersants work for oil spills the properties and chemistry of oils including weathering state the variables that affect dispersant performance and the relationships between laboratory methods and field situations The book also considers the strengths and limitations of specific laboratory tests including brief discussions of the applicability of results for estimating dispersant performance in field trials or conditions encountered during real spill events Laboratory tests are separated into four groups tank tests shake flask tests interfacial surface tension tests and flume tests Rapid screen field tests are considered as a separate group Recommendations for improvements in future laboratory testing are offered as well Oil Spill Dispersants will be useful for regulators evaluating dispersant agents field personnel involved with using dispersants laboratory scientists studying performance and behavior of oil and dispersants and managers responsible for designing studies related to the treatment of oil slicks with dispersants
