Photogrammetry of a 5m Inflatable Space Antenna with Consumer Digital Cameras Richard S. Pappa, 2000 This paper discusses photogrammetric measurements of a 5m diameter inflatable space antenna using four Kodak DC290 2 1 megapixel digital cameras The study had two objectives 1 Determine the photogrammetric measurement precision obtained using multiple consumer grade digital cameras and 2 Gain experience with new commercial photogrammetry software packages specifically PhotoModeler Pro from Eos Systems Inc The paper covers the eight steps required using this hardware software combination The baseline data set contained four images of the structure taken from various viewing directions Each image came from a separate camera This approach simulated the situation of using multiple time synchronized cameras which will be required in future tests of vibrating or deploying ultra lightweight space structures With four images the average measurement precision for more than 500 points on the antenna surface was less than 0 020 inches inplane and approximately 0 050 inches out of plane

Automotive Accident Reconstruction Donald E. Struble, Ph.D., 2013-09-24 Automotive Accident Reconstruction Practices and Principles introduces techniques for gathering information and interpreting evidence and presents computer based tools for analyzing crashes This book provides theory information and data sources techniques of investigation an interpretation of physical evidence and practical tips for beginners It also works as an ongoing reference for experienced reconstructionists The book emphasizes three things the theoretical foundation the presentation of data sources and the computer programs and spread sheets used to apply both theory and collected data in the reconstruction of actual crashes It discusses the specific requirements of reconstructing rollover crashes offers background in structural mechanics and describes how structural mechanics and impact mechanics are applied to automobiles that crash The text explores the treatment of crush energy when vehicles collide with each other and with fixed objects It delves into various classes of crashes and simulation models The framework of the book starts backward in time beginning with the analysis of post crash vehicle motions that occurred without driver control Applies time reverse methods in a detailed and rigorous way to vehicle run out trajectories utilizing the available physical evidence Walks the reader through a collection of digital crash test data from public sources with detailed instructions on how to process and filter the information Shows the reader how to build spread sheets detailing calculations involving crush energy and vehicle post crash trajectory characteristics Contains a comprehensive treatment of crush energy This text can also serve as a resource for industry professionals particularly with regard to the underlying physics

Automotive Accident Reconstruction Donald E. Struble, John D. Struble, 2020-01-24 This fully updated edition presents practices and principles applicable for the reconstruction of automobile and commercial truck crashes Like the First Edition it starts at the very beginning with fundamental principles information sources and data gathering and inspection techniques for accident scenes and vehicles It goes on to show how to analyze photographs and crash test data The book presents tire fundamentals and shows how to use

them in spreadsheet based reverse trajectory analysis Such methods are also applied to reconstructing rollover crashes Impacts with narrow fixed objects are discussed Impact mechanics structural dynamics and conservation based reconstruction methods are presented The book contains a comprehensive treatment of crush energy and how to develop structural stiffness properties from crash test data Computer simulations are reviewed and discussed Extensively revised this edition contains new material on side pole impacts It has entirely new chapters devoted to low speed impacts downloading electronic data from vehicles deriving structural stiffness in side impacts and incorporating electronic data into accident reconstructions

3D Synthetic Environment Reconstruction Mahdi Abdelguerfi, 2012-12-06 Although synthetic environments were traditionally used in military settings for mission rehearsal and simulations their use is rapidly spreading to a variety of applications in the commercial research and industrial sectors such as flight training for commercial aircraft city planning car safety research in real time traffic simulations and video games 3D Synthetic Environment Reconstruction contains seven invited chapters from leading experts in the field bringing together a coherent body of recent knowledge relating 3D geospatial data collection design issues and techniques used in synthetic environments design implementation and interoperability In particular this book describes new techniques for the generation of Synthetic Environments with increased resolution and rich attribution both essential for accurate modeling and simulation This book also deals with interoperability of models and simulations which is necessary for facilitating the reuse of modeling and simulation components 3D Synthetic Environment Reconstruction is an excellent reference for researchers and practitioners in the field

Collision Documentation Christopher D Armstrong, 2018-11-02 The last ten years have seen explosive growth in the technology available to the collision analyst changing the way reconstruction is practiced in fundamental ways The greatest technological advances for the crash reconstruction community have come in the realms of photogrammetry and digital media analysis The widespread use of scanning technology has facilitated the implementation of powerful new tools to digitize forensic data create 3D models and visualize and analyze crash vehicles and environments The introduction of unmanned aerial systems and standardization of crash data recorders to the crash reconstruction community have enhanced the ability of a crash analyst to visualize and model the components of a crash reconstruction Because of the technological changes occurring in the industry many SAE papers have been written to address the validation and use of new tools for collision reconstruction *Collision Reconstruction Methodologies Volumes 1 12* bring together seminal SAE technical papers surrounding advancements in the crash reconstruction field Topics featured in the series include Night Vision Study and Photogrammetry Vehicle Event Data Recorders Motorcycle Heavy Vehicle Bicycle and Pedestrian Accident Reconstruction The goal is to provide the latest technologies and methodologies being introduced into collision reconstruction appealing to crash analysts consultants and safety engineers alike Click here to purchase the entire set at a discount

Handbook of Research on Emerging Digital Tools for Architectural Surveying, Modeling, and Representation Brusaporci,

Stefano, 2015-07-13 Technological revolutions have changed the field of architecture exponentially. The advent of new technologies and digital tools will continue to advance the work of architects globally, aiding in architectural design, planning, implementation, and restoration. *The Handbook of Research on Emerging Digital Tools for Architectural Surveying, Modeling, and Representation* presents expansive coverage on the latest trends and digital solutions being applied to architectural heritage. Spanning two volumes of research-based content, this publication is an all-encompassing reference source for scholars, IT professionals, engineers, architects, and business managers interested in current methodologies, concepts, and instruments being used in the field of architecture.
