Physical Causation Cambridge Studies In Probability Induction And Decision Theory:

Physical Causation Phil Dowe, 2007 **Free Will, Causality and the Self** Atle Ottesen Søvik, 2016-09-12 A major goal for compatibilists is to avoid the luck problem and to include all the facts from neuroscience and natural science in general which purportedly show that the brain works in a law governed and causal way like any other part of nature Libertarians for their part want to avoid the manipulation argument and demonstrate that very common and deep seated convictions about freedom and responsibility are true it can really be fundamentally up to us as agents to determine that the future should be either A or B This book presents a theory of free will which integrates the main motivations of compatibilists and libertarians while at the same time avoiding their problems The so called event causal libertarianism is the libertarian account closest to compatibilism as it claims there is indeterminism in the mind of an agent The charge of compatibilists however is that this position is impaired by the problem of luck This book is unique in arguing that free will in a strong sense of the term does not require indeterminism in the brain only indeterminism somewhere in the world which there plausibly is Causation in Population Health Informatics and Data Science Olaf Dammann, Benjamin Smart, 2018-10-29 Marketing text This book covers the overlap between informatics computer science philosophy of causation and causal inference in epidemiology and population health research Key concepts covered include how data are generated and interpreted and how and why concepts in health informatics and the philosophy of science should be integrated in a systems thinking approach Furthermore a formal epistemology for the health sciences and public health is suggested Causation in Population Health Informatics and Data Science provides a detailed guide of the latest thinking on causal inference in population health informatics It is therefore a critical resource for all informaticians and epidemiologists interested in the potential benefits of utilising a systems based approach to causal inference in health informatics The Concept of Probability in Statistical Physics Y. M. Guttman, 1999-07-13 A most systematic study of how to interpret probabilistic assertions in the context of statistical mechanics **The Oxford Handbook of Causation** Helen Beebe, Christopher Hitchcock, Peter Menzies, 2012-01-12 Causation is a central topic in many areas of philosophy In metaphysics philosophers want to know what causation is and how it is related to laws of nature probability action and freedom of the will In epistemology philosophers investigate how causal claims can be inferred from statistical data and how causation is related to perception knowledge and explanation In the philosophy of mind philosophers want to know whether and how the mind can be said to have causal efficacy and in ethics whether there is a moral distinction between acts and omissions and whether the moral value of an act can be judged according to its consequences And causation is a contested concept in other fields of enquiry such as biology physics and the law This book provides an in depth and comprehensive overview of these and other topics as well as the history of the causation debate from the ancient Greeks to the logical empiricists The chapters provide surveys of contemporary debates while often also advancing novel and controversial claims and each includes a comprehensive bibliography and suggestions

for further reading The book is thus the most comprehensive source of information about causation currently available and will be invaluable for upper level undergraduates through to professional philosophers **Interpreting Probability** David Howie, 2002-08-08 The term probability can be used in two main senses In the frequency interpretation it is a limiting ratio in a sequence of repeatable events In the Bayesian view probability is a mental construct representing uncertainty This 2002 book is about these two types of probability and investigates how despite being adopted by scientists and statisticians in the eighteenth and nineteenth centuries Bayesianism was discredited as a theory of scientific inference during the 1920s and 1930s Through the examination of a dispute between two British scientists the author argues that a choice between the two interpretations is not forced by pure logic or the mathematics of the situation but depends on the experiences and aims of the individuals involved The book should be of interest to students and scientists interested in statistics and probability theories and to general readers with an interest in the history sociology and philosophy of science **Symmetry and Its**

Discontents S. L. Zabell, 2005-06-06 This volume contains essays on the history and philosophy of probability and statistics

Etiological Explanations Olaf Dammann, 2020-05-26 Theory of illness causation is an important issue in all biomedical sciences and solid etiological explanations are needed in order to develop therapeutic approaches in medicine and preventive interventions in public health Until now the literature about the theoretical underpinnings of illness causation research has been scarce and fragmented and lacking a convenient summary This interdisciplinary book provides a convenient and accessible distillation of the current status of research into this developing field and adds a personal flavor to the discussion by proposing the etiological stance as a comprehensive approach to identify modifiable causes of illness Key Features Provides a synthesis of the epidemiological and philosophical concepts in this growing research area Gives an accessible overview of current methods in biomedical causal metaphysics what is a cause of illness and epistemology how do we identify it Proposes a novel approach that integrates modern epidemiological methodology and recent theories from philosophy of science Written for postgraduate students and researchers in the health and biomedical sciences including those undertaking courses in the philosophy of medicine science public and global health introduction to epidemiology research methods and advanced reasoning the content will also be of interest to practicing public health workers biomedical scientists and physicians ABOUT THE AUTHOR Olaf Dammann is Professor and Vice Chair of Public Health and Community Medicine at Tufts University School of Medicine Boston Massachusetts USA as well as a Professor in the Department of Gynecology and Obstetrics at Hannover Medical School Hannover Germany Cover image Mask used by Eskimo shaman in causation of illness Credit Wellcome Collection CC BY <https://creativecommons.org/licenses/by/4.0/> **Power and Influence** Richard Corry, 2019 Corry examines the metaphysical presuppositions in the reductive method of explanation He argues that it makes assumptions about the nature of causal power and causal influence he outlines implications for traditional philosophical problems and he presents an integrated metaphysical worldview grounded in the nature of power and influence **Causal**

Reasoning in Physics Mathias Frisch, 2014-10-09 Much has been written on the role of causal notions and causal reasoning in the so called special sciences and in common sense But does causal reasoning also play a role in physics Mathias Frisch argues that contrary to what influential philosophical arguments purport to show the answer is yes Time asymmetric causal structures are as integral a part of the representational toolkit of physics as a theory's dynamical equations Frisch develops his argument partly through a critique of anti causal arguments and partly through a detailed examination of actual examples of causal notions in physics including causal principles invoked in linear response theory and in representations of radiation phenomena Offering a new perspective on the nature of scientific theories and causal reasoning this book will be of interest to professional philosophers graduate students and anyone interested in the role of causal thinking in science
