Philosophy of Natural Science Carl Gustav Hempel, 2013 **Coenraad Jacob Temminck and the Emergence of Systematics (1800-1850)** Eulàlia Gassó

Miracle, 2021-10-05 Coenraad Jacob Temminck and the Emergence of Systematics 1800 1850 is the first study to examine in detail the life and work of Coenraad Jacob Temminck 1778 1858 the Dutch naturalist who was the first director of s Rijks Museum van Natuurlijke Historie National Museum of Natural History in Leiden The Netherlands This study situates Temminck s activities in the context of European natural history during the early to the mid nineteenth century Three issues which defined the era are discussed in more detail the growing European colonial territories the rise of scientific meritocracy and the emergence of systematics as a discipline Temminck s biography elucidates how and why systematics developed and why its status within the natural sciences has been a matter of discussion for more than a century

Evolutionary Ethics Matthew H. Nitecki, Doris V. Nitecki, 1993-07-16 This volume analyzes the biological and philosophical disagreements in evolutionary ethics and points out difficulties with the interpretations The book is divided into four sections The first is an historical introduction to the origin of evolutionary ethics showing how different evolutionary ethics was a hundred years ago and how distant Huxley is from most of us now The second section argues for a sociobiological interpretation of evolutionary ethics The third section presents the view opposite to that of the second section and rejects the sociobiological interpretation The fourth section deals objectively with many complex and fundamental issues from diverse perspectives

A Journey to Philosophy Erkki Kemppainen, 2022-05-19 What are cause and effect and meaning What connects people What is law and what is its foundation The book guides the reader to a journey to philosophy The questions range from theory of knowledge and philosophy of science to the problems of the being as a human being social philosophy and philosophy of law The tradition of explanation which is typical for natural sciences focuses on the concepts of cause and effect The tradition of understanding focuses on meanings and interpretation Natural law theory and legal positivism are also analyzed The philosophies of Aristotle Immanuel Kant Edmund Husserl Martin Heidegger Ludwig Wittgenstein and Georg Henrik von

Wright are discussed at many points in the book Jürgen Habermas's discourse theory is presented as a synthesis in social theory and philosophy of law Erkki Kemppainen is a philosopher He has previously been a civil servant for a long time

Donald Davidson Marc Joseph, 2014-12-18 Donald Davidson's work has been of seminal importance in the development of analytic philosophy and his views on the nature of language mind and action remain the starting point for many of the central debates in the analytic tradition His ideas however are complex often technical and interconnected in ways that can make them difficult to understand This introduction to Davidson's philosophy examines the full range of his writings to provide a clear succinct overview of his ideas The book begins with an account of the assumptions and structure of Davidson's philosophy of language introducing his compositionism extensionalism and commitment to a Tarski style theory of truth as the model for theories of meaning It goes on to show how that philosophical framework is to be applied and how it challenges the traditional picture Marc Joseph examines Davidson's influential work on action theory and events and discusses the commonly made charge that his theory of action and mind leaves the mental as a mere epiphenomenon of the physical The final section explores Davidson's philosophy of mind some of its consequences for traditional views of subjectivity and objectivity and more generally the relation between minded beings and the physical and mental world they occupy The Riddles of Philosophy Rudolf Steiner, 2009-08 Written in 1909 CW 13 Esoteric science is the science of what takes place esoterically in the sense that it is perceived not outside in nature but where one's soul turns when it directs its inner being toward the spirit Esoteric science is the opposite and counterpart of natural science Rudolf Steiner This masterwork of esotericism places humankind at the very heart of the vast invisible processes of cosmic evolution When we use the term natural science don't we mean that we are dealing with human knowledge of nature Steiner worked and reworked his Rosicrucian cosmology to make it increasingly precise and accurate An Outline of Esoteric Science is as vital and relevant now as it was when first published in 1910 and remains the most comprehensive and effective presentation of a spiritual alternative to contemporary materialistic cosmologies and a strict Darwinian view of human nature and evolution In this foundational work of spiritual science we see how the creation and evolution of humanity is embedded at the heart of the vast invisible web of interacting cosmic beings through whom the alchemical processes of cosmic evolution continue to evolve Included are descriptions of the physical spiritual makeup of the human being the relationships of the different bodies of the human being to sleep and death and a detailed practical guide to methods and exercises including the Rose Cross Meditation through which we can attain knowledge of the spiritual worlds The most remarkable and revolutionary aspect of this work is the central function that Steiner attributes to the Christ and his involvement in human and earthly evolution through the Mystery of Golgotha An Outline of Esoteric Science is essential reading for all serious students of esoteric spirituality and Anthroposophy This foundational guide to Spiritual Science is a translation of *Die Geheimwissenschaft im Umriss* GA 13
