Proceedings of the GIREP-EPEC & PHEC 2009 International Conference "Physics Community and Cooperation" - Volume 2 Derek Raine, Cheryl Hurkett, Laurence Rogers, **Thinking in Physics** Laurence Viennot, 2014-03-18 Read this book if you care about students really understanding physics and getting genuine intellectual satisfaction from doing so Read it too if you fear that this goal is out of reach you may be surprised Laurence Viennot here shows ways to deal with the awkward fact that common sense thinking is often not the same as scientific thinking She analyses examples of frequent and widespread errors and confusions which provide a real eye opener for the teacher More than that she shows ways to avoid and overcome them The book argues against over emphasis on fun applications demonstrating that students also enjoy and value clear thinking The book has three parts making sense of special scientific ways of reasoning words images functions making connections between very different topics each illuminating the other simplifying looking for consistency and avoiding incoherent over simplification The book is enhanced with supplementary online materials that will allow readers to further expand their teaching or research interests and think about them more deeply **Multiple Representations in Physics Education** David F. Treagust, Reinders Duit, Hans E. Fischer, 2017-07-24 This volume is important because despite various external representations such as analogies metaphors and visualizations being commonly used by physics teachers educators and researchers the notion of using the pedagogical functions of multiple representations to support teaching and learning is still a gap in physics education The research presented in the three sections of the book is introduced by descriptions of various psychological theories that are applied in different ways for designing physics teaching and learning in classroom settings The following chapters of the book illustrate teaching and learning with respect to applying specific physics multiple representations in different levels of the education system and in different physics topics using analogies and models different modes and in reasoning and representational competence When multiple representations are used in physics for teaching the expectation is that they should be successful To ensure this is the case the implementation of representations should consider design principles for using multiple representations Investigations regarding their effect on classroom communication as well as on the learning results in all levels of schooling and for different topics of physics are reported The book is intended for physics educators and their students at universities and for physics teachers in schools to apply multiple representations in physics in a productive way *Mathematics and Science Education International Seminar 2021 (MASEIS 2021)* M. Lutfi Firdaus, Aprina Defianti, 2023-03-29 This is an open access book We warmly invite you to participate in Mathematics and Science Education International Seminar that was held on November 13th 2021 in Bengkulu Indonesia Since participants may come from different countries with variety of backgrounds the conference is an excellent forum for participants to exchange research findings and ideas on mathematics and science and to build networks for further collaborations The disruption era is related to the development of the industrial revolution 4.0 and society 5.0 era Industrial

Subcreation: Fictional-World Construction from J.R.R. Tolkien to Terry Pratchett and Tad Williams Stefanie Schult, 2017-01-26 The doctoral thesis argues that the term Subcreation with its revised and broadened definition in part differing from J. R. R. Tolkien's original term sub-creation may be used for the discussion of the making of fictional worlds in literary discourse. The successful conception of a fictional world depends on the reader's willing suspension of disbelief. This depends both on the author and his skilled composition of the world and all its aspects as well as on the reader's acceptance of this invented fictional world. The author needs to create a narrative with an inner consistency which is crucial to achieving the effect of the reader's immersion in the fictional world. The fundamental aspects that an author needs to realize to achieve successful Subcreation have been structured into and analysed in four categories: Language and Linguistic Variation, Physiopoeia, Anthropoeia and Mythopoeia. Furthermore this thesis shows that as contemporary examples of fantastic literature both Tad Williams's and Terry Pratchett's fictional worlds are successfully created through the realization of these aspects of Subcreation. Apart from commenting on the success of the subcreative process this thesis also remarks upon the cultural influences both authors include in their writings. While both may be considered Anglophone in a general categorization, Pratchett's Discworld retains a feeling of Britishness that is not to be found in Williams's Otherland. The thesis proposes several approaches to Subcreation that may be studied subsequently. So for example it may be possible to determine the success of an author's Subcreation by collecting empirical data. Apart from literary works this field of studies may also include other media.
