Nonlinear Operators And Differential Equations In Banach Spaces Pure Applied Mathematics Monograph:

Nonlinear Operators and Differential Equations in Banach Spaces Robert H. Martin, 1987 Monotone Operators in Banach Space and Nonlinear Partial Differential Equations R. E. Showalter, 2013-02-22 The objectives of this monograph are to present some topics from the theory of monotone operators and nonlinear semigroup theory which are directly applicable to the existence and uniqueness theory of initial boundary value problems for partial differential equations and to construct such operators as realizations of those problems in appropriate function spaces A highlight of this presentation is the large number and variety of examples introduced to illustrate the connection between the theory of nonlinear operators and partial differential equations These include primarily semilinear or quasilinear equations of elliptic or of parabolic type degenerate cases with change of type related systems and variational inequalities and spatial boundary conditions of the usual Dirichlet Neumann Robin or dynamic type The discussions of evolution equations include the usual initial value problems as well as periodic or more general nonlocal constraints history value problems those which may change type due to a possibly vanishing coefficient of the time derivative and other implicit evolution equations or systems including hysteresis models The scalar conservation law and semilinear wave equations are briefly mentioned and hyperbolic systems arising from vibrations of elastic plastic rods are developed The origins of a representative sample of such problems are given in the appendix

Nonlinear Operators and Differential Equations in Banach Spaces Robert H. Martin (jr.), 1976 **Nonlinear Functional Analysis and Applications** Jesús Garcia-Falset, Khalid Latrach, 2023-03-06 Nonlinear functional analysis is a central subject of mathematics with applications in many areas of geometry analysis fluid and elastic mechanics physics chemistry biology control theory optimization game theory economics etc This work is devoted in a self contained way to several subjects of this topic such as theory of accretive operators in Banach spaces theory of abstract Cauchy problem metric and topological fixed point theory Special emphasis is given to the study how these theories can be used to obtain existence and uniqueness of solutions for several types of evolution and stationary equations In particular equations arising in dynamical population and neutron transport equations are discussed **Nonlinear Differential Equations of**

Monotone Types in Banach Spaces Viorel Barbu, 2010-01-01 This monograph is concerned with the basic results on Cauchy problems associated with nonlinear monotone operators in Banach spaces with applications to partial differential equations of evolutive type It focuses on major results in recent decades Nonlinear Operators and Differential Equations in Banach Spaces Ronald H. Martin, 1976 Nonlinear Functional Evolutions in Banach Spaces Ki Sik Ha, 2013-04-17 There are many problems in nonlinear partial differential equations with delay which arise from for example physical models biochemical models and social models Some of them can be formulated as nonlinear functional evolutions in infinite dimensional abstract spaces Since Webb 1976 considered autonomous nonlinear functional evolutions in infinite dimensional real Hilbert spaces many nonlinear analysts have studied for the last nearly three decades autonomous nonlinear functional

evolutions non autonomous nonlinear functional evolutions and quasi nonlinear functional evolutions in infinite dimensional real Banach spaces The techniques developed for nonlinear evolutions in infinite dimensional real Banach spaces are applied This book gives a detailed account of the recent state of theory of nonlinear functional evolutions associated with accretive operators in infinite dimensional real Banach spaces Existence uniqueness and stability for solutions of nonlinear functional evolutions are considered Solutions are presented by nonlinear semigroups or evolution operators or methods of lines or inequalities by Benilan This book is divided into four chapters Chapter 1 contains some basic concepts and results in the theory of nonlinear operators and nonlinear evolutions in real Banach spaces that play very important roles in the following three chapters Chapter 2 deals with autonomous nonlinear functional evolutions in infinite dimensional real Banach spaces Chapter 3 is devoted to non autonomous nonlinear functional evolutions in infinite dimensional real Banach spaces Finally in Chapter 4 quasi nonlinear functional evolutions are considered in infinite dimensional real Banach spaces **Applied**
