Blue Malkit Shoshan, 2022-09-19 The book is part of FAST's ongoing activism research design and advocacy work. It builds on earlier presentations including the exhibition BLUE Architecture of UN Peacekeeping Missions for the Dutch Pavilion of the 15th Venice Architecture Biennale. At the intersection of architecture, urban planning, international relations, and activism, BLUE Architecture of UN Peacekeeping Missions seeks not only to change UN missions but also to open up and expand the operative realm of architecture. It combines research and projects involving policymakers, military engineers, and officers, anthropologists, local inhabitants, activists, rebels, diplomats, and ministers, architects and planners. BLUE offers examples of how entrenched institutional bureaucracies can be confronted by using more inclusive models of engagement and it shows how designs rooted in local cultures and empowerment can address a history of violence.

Structure and Properties of Fat Crystal Networks, Second Edition Alejandro G. Marangoni, Leendert H. Wesdorp, 2012-09-25 Lipid science and technology has grown exponentially since the turn of the millennium. The replacement of unhealthy fats in the foods we eat and of petroleum-based ingredients in the cosmetics we use is a top priority for consumers, government, and industry alike. Particularly for the food industry, removing trans fats and reducing saturated fat in foods has produced a major challenge. How do we create structure with a minimum amount of structuring material? A comprehensive omnibus, *Structure and Properties of Fat Crystal Networks, Second Edition* clarifies the complex relationship between triglyceride composition of vegetable oils and fats, the physicochemical properties of triglycerides in simple and complex model systems, their crystallization and melting behavior. Furthermore, it dives into the implications of these materials on the functional properties in food systems. Replacing ingredients, optimizing functionality, and improving health necessitate the ability to relate the structural organization present in a material to macroscopic properties. Revisiting concepts and approaches used in the study of fat crystal networks, the second edition includes new developments, particularly intermolecular interactions and thoroughly updated analytical methods. Succinct, clear, and complete, this book is designed to help students and early career researchers make the study of fats a more focused, less frustrating, and less expensive endeavor.

[Digitally Assisted Pipeline ADCs](#) Boris Murmann, Bernhard E. Boser, 2007-05-08 *Digitally Assisted Pipeline ADCs: Theory and Implementation* explores the opportunity to reduce ADC power dissipation by leveraging digital signal processing capabilities in fine-line integrated circuit technology. The described digitally assisted pipelined ADC uses a statistics-based system identification technique as an enabling element to replace precision residue amplifiers with simple open-loop gain stages. The digital compensation of analog circuit distortion eliminates one key factor in the classical noise-speed-linearity constraint loop and thereby enables a significant power reduction. *Digitally Assisted Pipeline ADCs: Theory and Implementation* describes in detail the implementation and measurement results of a 12-bit 75-MSample/sec proof-of-concept prototype. The experimental converter achieves power savings greater than 60% over conventional implementations. *Digitally Assisted Pipeline ADCs: Theory and*

Implementation will be of interest to researchers and professionals interested in advances of state of the art in A D conversion techniques

Target Station Optimization for the High-Brilliance Neutron Source HBS Jan Philipp Dabruck, 2018-12-29 In the present work the target station of the accelerator driven neutron source HBS is optimized in comprehensive parameter studies using the Monte Carlo method The dependence of the most important performance characteristics of such a system on the external parameters is investigated neglecting technical and mechanical limitations In this way qualitative and quantitative statements for all possible configurations and envisaged applications can be derived and should be considered in the detailed planning of such facilities For this purpose different scenarios are considered that place completely different requirements on the design of the target station The central statements derived in this thesis can be transferred to any framework conditions such as different accelerator energies so that these results can be used in the development of other neutron sources which together with the HBS form a European network and provide a prosperous community in neutron science
