The Social Cognitive Neuroscience of Leading Organizational Change Robert A. Snyder, 2016-03-10 In a very understandable practical and accessible manner this book applies recent groundbreaking findings from behavioral neuroscience to the most complex and vexing challenges in organizations today In particular it addresses managing large scale organizational changes such as mergers and acquisitions providing lessons and tactics that can be usefully applied to in many different settings In addition to discussing successful practices it also identifies the reasons that most past comprehensive long term change projects have failed and unmasks the counterproductive effects of the typical evolutionary or emotion based attempts to change group and individual behavior using neuroscience as its principal tool *Military Neuroscience and the Coming Age of Neurowarfare* Armin Krishnan, 2016-10-04 Krishnan describes military applications of neuroscience research and emerging neurotechnology with relevance to the conduct of armed conflict and law enforcement This work builds upon literature by scholars such as Moreno and Giordano and fills an existing gap not only in terms of reviewing available and future neurotechnologies and relevant applications but by discussing how the military pursuit of these technologies fits into the overall strategic context The first to sketch future neurowarfare by looking at its potentials as well as its inherent limitations this book's main theme is how military neuroscience will enhance and possibly transform both classical psychological operations and cyber warfare Its core argument is that nonlethal strategies and tactics could become central to warfare in the first half of the twenty first century This creates both humanitarian opportunities in making war less bloody and burdensome as well as some unprecedented threats and dangers in terms of preserving freedom of thought and will in a coming age where minds can be manipulated with great precision Dimensions of Human Behavior Elizabeth D.
