 Lienhard, 2012-12-17 Whether it be as translucent sheets broadly stretched membranes and inflated foil cushions or in
 graceful organic curves architecture today is utilizing plastics in the most disparate forms and for a wide variety of purposes
 Innovative technical developments are constantly improving its material properties at the same time there is a growing new
 awareness of its potential as a construction material While plastics used to be employed primarily as an inexpensive variant
 on traditional building materials they are increasingly regarded in the construction world today as a serious and viable
 alternative be it as supporting structures roofs facades or elements of interior design and decoration Thanks in large part to
 this inherent self sufficiency plastics are currently enjoying an unprecedented surge in popularity even among the
 international architectural avant garde as multiwall sheets or corrugated fiber reinforced panels or as filling between glass
 panes And the new generation of ecological bioplastics also pays tribute to the debate on sustainability ridding plastics of
 their lingering reputation as environmental offenders From the history of plastics and membranes in architecture to their

material properties and requirements in construction and design the *Plastics and Membranes Construction Manual* cuts to the chase providing the kind of solid and comprehensive overview of the subject that readers have come to expect from the *Im DETAIL* series. Selected project examples round off the reference work and make it indispensable for the day to day life of the professional planner and for every architecture library.
