**Non-covalent Interactions** Pavel Hobza, Klaus Müller-Dethlefs, 2010 Co authored by an experimentalist Klaus M3ller Dethlefs and theoretician Pavel Hobza the aim of this book is to provide a general introduction into the science behind non covalent interactions and molecular complexes using some important experimental and theoretical methods and approaches

**Computational Quantum Chemistry** Joseph J W McDouall, 2015-11-09 Computational Quantum Chemistry presents computational electronic structure theory as practised in terms of ab initio waveform methods and density functional approaches Getting a full grasp of the field can often prove difficult since essential topics fall outside of the scope of conventional chemistry education This professional reference book provides a comprehensive introduction to the field Postgraduate students and experienced researchers alike will appreciate Joseph McDouall s engaging writing style The book is divided into five chapters each providing a major aspect of the field Electronic structure methods the computation of molecular properties methods for analysing the output from computations and the importance of relativistic effects on molecular properties are also discussed Links to the websites of widely used software packages are provided so that the reader can gain first hand experience of using the techniques described in the book

**Simulating Enzyme Reactivity** Inaki Tunon, Vicent Moliner, 2016-11-25 Exploring the theories methodologies and applications in simulations of enzymatic reactions this book is a great resource for postgraduate students and researchers

**In Silico Medicinal Chemistry** Nathan Brown, 2015-11-02 Exploring the methodologies and applications of computational tools in drug design this book is a practical introduction to chemoinformatics molecular modelling and computational chemistry for researchers

**Theory of Molecular Collisions** Gabriel G. Balint-Kurti, Alexander P. Palov, 2015-07-03 Almost 100 years have passed since Trautz and Lewis put forward their collision theory of molecular processes Today knowledge of molecular collisions forms a key part of predicting and understanding chemical reactions This book begins by setting out the classical and quantum theories of atom atom collisions Experimentally observable aspects of the scattering processes their relationship to reaction rate constants and the experimental methods used to determine them are described The quantum mechanical theory of reactive scattering is presented and related to experimental observables The role of lasers in the measurement and analysis of reactive molecular collisions is also discussed Written with postgraduates and newcomers to the field in mind mathematics is kept to a minimum and readers are guided to appendices and further reading to gain a deeper understanding of the mathematics involved

**Computational Biophysics of Membrane Proteins** Carmen Domene, 2016-11-30 Exploring current themes in modern computational and membrane protein biophysics this book presents a comprehensive account of the fundamental principles underlying different methods and techniques used to describe the intriguing mechanisms by which membrane proteins function The book discusses the experimental approaches employed to study these proteins with chapters reviewing recent crucial structural advances that have allowed computational biophysicists to discern how these molecular machines

work The book then explores what computational methods are available to researchers and what these have taught us about three key families of membrane proteins ion channels transporters and receptors The book is ideal for researchers in computational chemistry and computational biophysics
