Schertzer, Shaun Lovejoy, 1996-01-01 **Nonlinear Processes in Geophysics**, 2009 *Advances in Nonlinear*

Geosciences Anastasios A. Tsonis, 2017-10-13 *Advances in Nonlinear Geosciences* is a set of contributions from the participants of 30 Years of Nonlinear Dynamics held July 3-8 2016 in Rhodes Greece as part of the Aegean Conferences as well as from several other experts in the field who could not attend the meeting. The volume brings together up to date research from the atmospheric sciences, hydrology, geology and other areas of geosciences and presents the new advances made in the last 10 years. Topics include chaos, synchronization, topological data analysis, new insights on fractals, multifractals and stochasticity, climate dynamics, extreme events, complexity and causality among other topics.

Introduction to Aquifer Analysis Michael Kasenow, 1997 **Fractals' Physical Origin and Properties** Luciano Pietronero, 2013-12-19 This volume contains the Proceedings of the Special Seminar on FRAGTALS held from October 9-15 1988 at the Ettore Majorana Centre for Scientific Culture, Erice, Trapani, Italy. The concepts of self-similarity and scale invariance have arisen independently in several areas. One is the study of critical properties of phase transitions; another is fractal geometry which involves the concept of non-integer fractal dimension. These two areas have now come together and their methods have extended to various fields of physics. The purpose of this Seminar was to provide an overview of the recent developments in the field. Most of the contributions are theoretical but some experimental work is also included. During the past few years two tendencies have emerged in this field: one is to realize that many phenomena can be naturally modelled by fractal structures. So one can use this concept to define simple models and study their physical properties. The second point of view is more microscopic and tries to answer the question why nature gives rise to fractal structures. This implies the formulation of fractal growth models based on physical concepts and their theoretical understanding in the same sense as the Renormalization Group method has allowed to understand the critical properties of phase transitions.

Nonlinear Processes in Geophysics, 1992 Geomathematics: Theoretical Foundations, Applications and Future Developments Frits Agterberg, 2014-07-14 This book provides a wealth of geomathematical case history studies performed by the author during his career at the Ministry of Natural Resources Canada, Geological Survey of Canada, NRCAN, GSC. Several of the techniques newly developed by the author and colleagues that are described in this book have become widely adopted not only for further research by geomathematical colleagues but by government organizations and industry worldwide. These include Weights of Evidence modelling, mineral resource estimation, technology trend surface analysis, automatic stratigraphic correlation and nonlinear geochemical exploration methods. The author has developed maximum likelihood methodology and spline fitting techniques for the construction of the international numerical geologic timescale. He has introduced the application of new theory of fractals and multi-fractals in the geostatistical evaluation of regional mineral resources and ore reserves and to study the spatial distribution of metals in rocks. The book also contains sections deemed important by the author but that have not been widely adopted because they require further research. These include the geometry of preferred orientations of contours and edge effects on maps, time series analysis of Quaternary retreating ice sheet related sedimentary

data estimation of first and last appearances of fossil taxa from frequency distributions of their observed first and last occurrences tectonic reactivation along pre existing schistosity planes in fold belts use of the grouped jackknife method for bias reduction in geometrical extrapolations and new applications of the theory of permanent volume independent frequency distributions
