Nonlinear Hybrid Continuousdiscrete Time Models Atlantis Studies In Mathematics For Engineering And Science:

Nonlinear Hybrid Continuous/Discrete-Time Models Marat Akhmet,2011-05-03 The book is mainly about hybrid systems with continuous discrete time dynamics The major part of the book consists of the theory of equations with piece wise constant argument of generalized type The systems as well as technique of investigation were introduced by the author very recently They both generalized known theory about differential equations with piece wise constant argument introduced by K Cook and J Wiener in the 1980s Moreover differential equations with fixed and variable moments of impulses are used to model real world problems We consider models of neural networks blood pressure distribution and a generalized model of the cardiac pacemaker All the results of the manuscript have not been published in any book yet They are very recent and united with the presence of the continuous discrete dynamics of time It is of big interest for specialists in biology medicine engineering sciences electronics Theoretical aspects of the book meet very strong expectations of mathematicians who investigate differential equations with discontinuities of any type Multidimensional Integral Equations and Inequalities B.G. Pachpatte,2011-07-26 Since from more than a century the study of various types of integral equations and inequalities has been focus of great attention by many researchers interested both in theory and its applications In particular there exists a very rich literature related to the integral equations and inequalities and their applications The present monograph is an attempt to organize recent progress related to the Multidimensional integral equations and inequalities which we hope will widen the scope of their new applications The field to be covered is extremely wide and it is nearly impossible to treat all of them here The material included in the monograph is recent and hard to find in other books It is accessible to any reader with reasonable background in real analysis and acquaintance with its related areas All results are presented in an elementary way and the book could also serve as a textbook for an advanced graduate course The book deserves a warm welcome to those who wish to learn the subject and it will also be most valuable as a source of reference in the field It will be an invaluable reading for mathematicians physicists and engineers and also for graduate students scientists and scholars wishing to keep abreast of this important area of research H-Systems Elena De Santis,Maria Domenica Di Benedetto,2023-05-08 This book focuses on the observability of hybrid systems It enables the reader to determine whether and how a hybrid system s state can be reconstructed from sometimes necessarily partial information By explaining how available measurements can be used to deduce past and future behaviours of a system the authors extend this study of observability to embrace the properties of diagnosability and predictability H systems shows how continuous and discrete dynamics and their interaction affect the observability of this general class of hybrid systems and demonstrates that hybrid characteristics are not simply generalizations of well known aspects of traditional dynamics The authors identify conditions for state reconstruction prediction and diagnosis of the occurrence of possibly faulty states The formal approach to proving

those properties for hybrid systems is accompanied by simple illustrative examples For readers who are interested in the use of state estimation for controller design the book also provides design methods for hybrid state observers and covers their application in some industrial cases The book s tutorial approach to the various forms of observability of hybrid systems helps to make H systems of interest to academic researchers and graduate students working in control and to practitioners using control in an industrial environment **Atlantis Studies in Mathematics for Engineering and Science** ,2008
