Nikolay Britun,Tiago Silva,2018-12-19 Low temperature non equilibrium gaseous discharges represent nearly ideal media for boosting plasma based chemical reactions In these discharges the energy of plasma electrons after being received from the electromagnetic field is transferred to the other degrees of freedom differently ideally with only a small part going to the translational motion of heavy gas particles This unique property enables the important application of non equilibrium plasmas for greenhouse gas conversion While the degree of discharge non equilibrium often defines the energetic efficiency of conversion other factors are also of a great importance such as type of discharge presence of plasma catalysis etc This

book is focused on the recent achievements in optimization and understanding of non equilibrium plasma for gas conversion via plasma modeling and experimental work *Plasma Science and Technology* Alexander Fridman, 2024-02-05 Plasma Science and Technology An accessible introduction to the fundamentals of plasma science and its applications In Plasma Science and Technology Lectures in Physics Chemistry Biology and Engineering distinguished researcher Dr Alexander Fridman delivers a comprehensive introduction to plasma technology including fulsome descriptions of the fundamentals of plasmas and discharges The author discusses a wide variety of practical applications of the technology to medicine energy catalysis coatings and more emphasizing engineering and science fundamentals Offering readers illuminating problems and concept questions to support understanding and self study the book also details organic and inorganic applications of plasma technologies demonstrating its use in nature in the lab and in both novel and well known applications Readers will also find A thorough introduction to the kinetics of excited atoms and molecules Comprehensive explorations of non equilibrium atmospheric pressure cold discharges Practical discussions of plasma processing in microelectronics and other micro technologies Expert treatments of plasma in environmental control technologies including the cleaning of air exhaust gases water and soil Perfect for students of chemical engineering physics and chemistry Plasma Science and Technology will also benefit professionals working in these fields who seek a contemporary refresher in the fundamentals of plasma science and its applications **Complex Plasmas** Michael Bonitz, Jose Lopez, Kurt Becker, Hauke Thomsen, 2014-04-09 This book provides the reader with an introduction to the physics of complex plasmas a discussion of the specific scientific and technical challenges they present and an overview of their potential technological applications Complex plasmas differ from conventional high temperature plasmas in several ways they may contain additional species including nano meter to micrometer sized particles negative ions molecules and radicals and they may exhibit strong correlations or quantum effects This book introduces the classical and quantum mechanical approaches used to describe and simulate complex plasmas It also covers some key experimental techniques used in the analysis of these plasmas including calorimetric probe methods IR absorption techniques and X ray absorption spectroscopy The final part of the book reviews the emerging applications of microcavity and microchannel plasmas the synthesis and assembly of nanomaterials through plasma electrochemistry the large scale generation of ozone using microplasmas and novel applications of atmospheric pressure non thermal plasmas in dentistry Going beyond the scope of traditional plasma texts the presentation is very well suited for senior undergraduate graduate students and postdoctoral researchers specializing in plasma physics *Low-Temperature Plasma Chemical Engineering* Yi Cheng, Xin Tu, 2025-11-01 Low Temperature Plasma Chemical Engineering bridges the gap between the plasma and chemical engineering communities It includes principles and mechanisms of plasma process intensification novel plasma reactor and process design and process optimization The book highlights various plasma chemical processes such as oxidation of volatile organic compounds VOCs methane reforming CO₂ conversion and biomass tar reforming It also
