modelling Although the nature of cost effectiveness modelling means that some parts are inevitably quite technical across the 13 chapters we have broken down explanations of theory and methods into bite sized pieces that you can work through at your own pace we have provided explanations of terms and methods as we use them Importantly the exercises and online workbooks allow you to test your skills and understanding as you go along *Setting Priorities for Health Technologies Assessment* Institute of Medicine, Committee on Priorities for Assessment and Reassessment of Health Care Technologies, 1992-02-01 The problem of deciding which health care technologies to evaluate is urgent With new technologies proliferating alongside steadily increasing health care costs it is critical to discriminate among technologies to direct tests and treatments at those who can benefit the most Given the vast number of clinical problems and technologies to be evaluated the many months of work required to study just one problem and the relatively few clinicians with highly developed analytic skills institutions must set priorities for assessment This book sets forth criteria and a method that can be used by public agencies such as the Office of Health Technology Assessment in the U S Public Health Service and by any private organization conducting such work to decide which technologies to assess or reassess **Medical Technology Assessment Directory** Institute of Medicine, Council on Health Care Technology, 1988-02-01 For the first time a single reference identifies medical technology assessment programs A valuable guide to the field this directory contains more than 60 profiles of programs that conduct and report on medical technology assessments Each profile includes a listing of report citations for that program and all the reports are indexed under major subject headings Also included is a cross listing of technology assessment report citations arranged by type of technology headings brief descriptions of approximately 70 information sources of potential interest to technology assessors and addresses and descriptions of 70 organizations with memberships activities publications and other functions relevant to the medical technology assessment community

Health Technology Assessment, Courts and the Right to Healthcare Daniel Wang, 2021-12-30 Both developing and developed countries face an increasing mismatch between what patients expect to receive from healthcare and what the public healthcare systems can afford to provide Where there has been a growing recognition of the entitlement to receive healthcare the frustrated expectations with regards to the level of provision has led to lawsuits challenging the denial of funding for health treatments by public health systems This book analyses the impact of courts and litigation on the way health systems set priorities and make rationing decisions In particular it focuses on how the judicial protection of the right to healthcare can impact the institutionalization functioning and centrality of Health Technology Assessment HTA for decisions about the funding of treatment Based on the case study of three jurisdictions Brazil Colombia and England it shows that courts can be a key driver for the institutionalization of HTA These case studies show the paradoxes of judicial control which can promote accountability and impair it demand administrative competence and undermine bureaucratic capacities The case studies offer a nuanced and evidence informed understanding of these paradoxes in the context of health care by

showing how the judicial control of priority setting decisions in health care can be used to require and control an explicit scheme for health technology assessment but can also limit and circumvent it It will be essential for those researching Medical Law and Healthcare Policy Human Rights Law and Social Rights **Assistive Technology Assessment**
