Proof And Other Dilemmas Mathematics And Philosophy Spectrum:

Proof and Other Dilemmas Bonnie Gold, Roger A. Simons, 2008 During the first 75 years of the twentieth century almost all work in the philosophy of mathematics concerned foundational questions In the last quarter of the century philosophers of mathematics began to return to basic questions concerning the philosophy of mathematics such as what is the nature of mathematical knowledge and of mathematical objects and how is mathematics related to science Two new schools of philosophy of mathematics social constructivism and structuralism were added to the four traditional views formalism intuitionism logicism and platonism The advent of the computer led to proofs and the development of mathematics assisted by computer and to questions of the role of the computer in mathematics This book of 16 essays all written specifically for this volume is the first to explore this range of new developments in a language accessible to mathematicians Approximately half the essays were written by mathematicians and consider questions that philosophers are not yet discussing The other half written by philosophers of mathematics summarize the discussion in that community during the last 35 years In each case a connection is made to issues relevant to the teach of mathematics

New Waves in Philosophy of Mathematics O. Bueno, Ø. Linnebo, 2009-09-29 Thirteen promising young researchers write on what they take to be the right philosophical account of mathematics and discuss where the philosophy of mathematics ought to be going New trends are revealed such as an increasing attention to mathematical practice a reassessment of the canon and inspiration from philosophical logic

Proof Theory Katalin Bimbo, 2014-08-20 Although sequent calculi constitute an important category of proof systems they are not as well known as axiomatic and natural deduction systems Addressing this deficiency Proof Theory Sequent Calculi and Related Formalisms presents a comprehensive treatment of sequent calculi including a wide range of variations It focuses on sequent calculi

Mathematics, Substance and Surmise Ernest Davis, Philip J. Davis, 2015-11-17 The seventeen thought provoking and engaging essays in this collection present readers with a wide range of diverse perspectives on the ontology of mathematics The essays address such questions as What kind of things are mathematical objects What kinds of assertions do mathematical statements make How do people think and speak about mathematics How does society use mathematics How have our answers to these questions changed over the last two millennia and how might they change again in the future The authors include mathematicians philosophers computer scientists cognitive psychologists sociologists educators and mathematical historians each brings their own expertise and insights to the discussion Contributors to this volume Jeremy Avigad Jody Azzouni David H Bailey David Berlinski Jonathan M Borwein Ernest Davis Philip J Davis Donald Gillies Jeremy Gray Jesper L tzen Ursula Martin Kay O Halloran Alison Pease Steven Piantadosi Lance Rips Micah T Ross Nathalie Sinclair John Stillwell Hellen Verran

Category Theory in Physics, Mathematics, and Philosophy Marek Kuś, Bartłomiej Skowron, 2019-11-11 The contributions gathered here demonstrate how categorical ontology can provide a basis for linking three important basic sciences mathematics physics and philosophy Category theory is a new formal

ontology that shifts the main focus from objects to processes The book approaches formal ontology in the original sense put forward by the philosopher Edmund Husserl namely as a science that deals with entities that can be exemplified in all spheres and domains of reality It is a dynamic processual and non substantial ontology in which all entities can be treated as transformations and in which objects are merely the sources and aims of these transformations Thus in a rather surprising way when employed as a formal ontology category theory can unite seemingly disparate disciplines in contemporary science and the humanities such as physics mathematics and philosophy but also computer and complex systems science
