Protein Folding Kinetics Biophysical Methods By Bengt Nlting 2010 11 23:

Protein Folding Kinetics Bengt Nölting, 2005-11-28 *Protein Folding Kinetics Biophysical Methods* 2nd Edition gives a deep insight into the principles and concepts of the kinetic and structural resolution of fast chemical and biophysical reactions of proteins with emphasis on protein folding reactions. The study of fast protein folding reactions and the understanding of the folding paradox have significantly advanced due to the recent development of new biophysical methods which allow not only kinetic resolution in the sub millisecond time scale but also structural resolution with unprecedented precision. Pathways and structures of early and late folding events and the transition state structures of fast and ultrafast folding proteins can now be studied in far more detail. Important techniques include biophysical chemical molecular biological and mathematical methods in particular protein engineering, Phi value analysis, time resolved circular dichroism, optical triggers and pulsed infrared LASER methods, pressure and temperature jump, ultrafast mixing, stopped flow and quenched flow, dielectric relaxation and electric field jump, acoustic relaxation, fluorescence and isotope labeling, H/D exchange methods, NMR line broadening and stopped flow NMR, transition state theory, solutions of rate equations and evolutionary computer programming. *Protein Folding Kinetics Biophysical Methods* is written for students and researchers in biochemistry, biophysics and related fields. Special features in the second edition include detailed information and 12 color figures on the high resolution of folding transition states. Discusses structural determinants of the rate of protein folding on a timescale from microseconds to seconds. Provides information on self evolving computer programs for protein folding simulations and protein structure predictions. *Protein Folding Kinetics* Bengt Nölting, 1999
