Principles of Gender-Specific Medicine Marianne Legato J, 2023-04-03 Awarded with the 2018 Prose Award in Clinical Medicine the third edition of Principles of Gender Specific Medicine explored and described exciting new areas in biomedicine that integrated technology into the treatment of disease and the augmentation of human function Novel topics such as the sex specific aspects of space medicine the development and the use of genderized robots and a discussion of cyborgs were included in the third edition providing a preview of the expanding world of sex specific physiology and therapeutics This

Fourth Edition is a continuation of the mission to trace the relevance of biological sex to normal function and to the experience of disease in humans. We are now twenty years into the postgenomic era. The investigation of how the genome produces the phenotype has led to fascinating insights as well as yet unanswered questions. Principles of Gender Specific Medicine Fourth Edition has a central theme: discuss advances in understanding the role of epigenetics in regulating gene expression in a dynamic sex specific way during human life. It explores the protean role of epigenetics in human physiology, the relevance of environmental experience to human function, the therapeutic promise of cutting edge methodologies like gene manipulation, the preparation of humans for space travel, the use of artificial intelligence in detection and therapeutic decisions concerning disease states, the possibilities for technological support of not only compromised individuals but of the augmentation of human function, and an analysis of the benefits, limitations, and issues that surround our current expectations of personalized medicine. Covers the most important developments in biomedical research in the past decade with a thoughtful analysis of how they impact patient care. Discusses the feasibility and usefulness of personalized medicine, the limits and promise of genetic editing, the basis for variation in sexual identity, and how artificial intelligence and technology will affect basic human function as well as correcting disability. Promotes and facilitates discussions about the ethics and governance issues that surround much of what science is now able to do at the most basic levels of human's physiology.

Natural and Artificial Computation in Engineering and Medical Applications Jose Manuel Ferrandez Vicente, Jose Ramon Alvarez Sanchez, Felix de la Paz Lopez, Fco. Javier Toledo Moreo, 2013-06-03. The two volume set LNCS 7930 and LNCS 7931 constitutes the refereed proceedings of the 5th International Work Conference on the Interplay between Natural and Artificial Computation (WINAC 2013) held in Mallorca, Spain, in June 2013. The 92 revised full papers presented in LNCS 7930 and LNCS 7931 were carefully reviewed and selected from numerous submissions. The first part LNCS 7930 entitled *Natural and Artificial Models in Computation and Biology* includes all the contributions mainly related to the methodological, conceptual, formal, and experimental developments in the fields of neurophysiology and cognitive science. The second part LNCS 7931 entitled *Natural and Artificial Computation in Engineering and Medical Applications* contains the papers related to bioinspired programming strategies and all the contributions related to the computational solutions to engineering problems in different application domains, specially Health applications including the CYTED Artificial and Natural Computation for Health (CANS) research network papers. In addition, this two volume set reflects six interesting areas: cognitive robotics, natural computing, wetware, computation, quality of life technologies, biomedical and industrial perception applications, and Web intelligence and neuroscience.
