Psychoacoustics Facts And Models Springer Series In Information Sciences:

Psychoacoustics Hugo Fastl, Eberhard Zwicker, 2007-06-30 Psychoacoustics Facts and Models offers a unique comprehensive summary of information describing the processing of sound by the human hearing system. It includes quantitative relations between sound stimuli and auditory perception in terms of hearing sensations for which quantitative models are given as well as an unequalled collection of data on the human hearing system as a receiver of acoustic information. In addition, many examples of the practical application of the results of basic research in fields such as noise control, audiology, or sound quality engineering are detailed. The third edition includes an additional chapter on audio visual interactions and applications, plus more on applications throughout. Reviews of previous editions have characterized it as an essential source of psychoacoustic knowledge, a major landmark, and a book that without doubt will have a long lasting effect on the standing and future evolution of this scientific domain.

Algorithms in Ambient Intelligence W. Verhaegh, Emile Aarts, Jan Korst, 2013-03-09 The advent of the digital era, the Internet, and the development of fast computing devices that can access mass storage servers at high communication bandwidths have brought within our reach the world of ambient intelligent systems. These systems provide users with information, communication, and entertainment at any desired place and time. Since its introduction in 1998, the vision of Ambient Intelligence has attracted much attention within the research community. Especially the need for intelligence generated by smart algorithms which run on digital platforms that are integrated into consumer electronics devices has strengthened the interest in Computational Intelligence. This newly developing research field, which can be positioned at the intersection of computer science, discrete mathematics, and artificial intelligence, contains a large variety of interesting topics including machine learning, content management, vision, speech data mining, content augmentation, profiling, contextual awareness, feature extraction, resource management, security, and privacy.
