

Insight

Insight is the understanding of a specific cause and effect in a specific context. The term insight can have several related meanings:

- a piece of information
- the act or result of understanding the inner nature of things or of seeing intuitively (called noesis in Greek)
- an introspection
- the power of acute observation and deduction, penetration, discernment, perception called intellection or noesis
- an understanding of cause and effect based on identification of relationships and behaviors within a model, context, or scenario (see artificial intelligence)

An insight that manifests itself suddenly, such as understanding how to solve a difficult problem, is sometimes called by the German word Aha-Erlebnis. The term was coined by the German psychologist and theoretical linguist Karl Buhler. It is also known as an epiphany.

Psychology

Representation of the Duncker Candle Problem ^[1]

In psychology, insight occurs when a solution to a problem presents itself quickly and without warning. ^[2] It is the sudden discovery of the correct solution following incorrect attempts based on trial and error. ^[3]

Insight was first studied by Gestalt Psychology, in the early part of the 20th century, during the search for an alternative to associationism and the associationistic view of learning. ^[4] Some proposed potential mechanisms for insight include: suddenly seeing the problem in a new way, connecting the problem to another relevant problem/solution pair, releasing past experiences that are blocking the solution, or seeing problem in a larger, coherent context. ^[5]
