Toward A Psychology of Persons William E. Smythe, 2013-05-13 This closely integrated collection of essays constitutes a wide ranging and comprehensive attempt to understand persons within psychology a long lost enterprise The volume was inspired by the observation that contemporary psychology has become increasingly depersonalized in its conceptions and its methodology and has thereby lost touch with its traditional subject matter of human individuality and the nature of persons This development now threatens the integrity of psychology as a discipline Using both a critical and constructive approach the various contributors share two common objectives to explore the roots of depersonalization in modern psychology through systematic criticism of contemporary functionalist and neo functionalist approaches to articulate some alternative holistic interpretive and historical approaches to the psychology of persons Despite these common objectives the chapters reflect a wide variety of theoretical perspectives and approaches including cognitive science and neuroscience discursive psychology hermeneutics social constructionism semiotics rhetorical analysis and psychological aesthetics These essays do not converge on a unified psychology of persons but they do serve to reopen a form of discourse that has long been absent from mainstream psychology This volume emerged from the deliberations of the Western Canadian Theoretical Psychologists WCTP a group of scholars primarily from Western Canadian universities with shared interests in the history and theory of psychology From its founding in 1989 to the present the WCTP has been actively engaged in promoting and contributing to the development of theoretical psychology Over the past half dozen years scholars have greatly benefitted from the close collaboration and collegial support that participation in the WCTP makes possible The annual meetings provide an opportunity for them to catch up on each other s work and also to pool their expertise to work on topics of shared interest

The Believing Brain Michael Shermer, 2011-05-24 A wonderfully lucid accessible and wide ranging account of the boundary between justified and unjustified belief Sam Harris New York Times bestselling author of *The Moral Landscape* and *The End of Faith* In this work synthesizing thirty years of research psychologist historian of science and the world s best known skeptic Michael Shermer upends the traditional thinking about how humans form beliefs about the world Simply put beliefs come first and explanations for beliefs follow The brain Shermer argues is a belief engine From sensory data flowing in through the senses the brain naturally begins to look for and find patterns and then infuses those patterns with meaning

Our brains connect the dots of our world into meaningful patterns that explain why things happen and these patterns become beliefs. Once beliefs are formed the brain begins to look for and find confirmatory evidence in support of those beliefs which accelerates the process of reinforcing them and round and round the process goes in a positive feedback loop of belief confirmation. Shermer outlines the numerous cognitive tools our brains engage to reinforce our beliefs as truths. Interlaced with his theory of belief, Shermer provides countless real world examples of how this process operates from politics, economics and religion to conspiracy theories, the supernatural and the paranormal. Ultimately he demonstrates why science is the best tool ever devised to determine whether or not a belief matches reality. A must read for everyone who wonders why religious and political beliefs are so rigid and polarized or why the other side is always wrong but somehow doesn't see it. Dr. Leonard Mlodinow, physicist and author of *The Drunkard's Walk* and *The Grand Design* with Stephen Hawking. **Study**

Guide for Invitation to Psychology Douglas A Johnson (Ph.D.), Carole Wade, Carol Tavris, 2011-04. For use with *Invitation to psychology* Carole Wade, Carol Tavris. **Introducing Psychology** Nigel Benson, 2014-06-05. What is psychology? When did it begin? Where did it come from? How does psychology compare with related subjects such as psychiatry and psychotherapy? To what extent is it scientific? *Introducing Psychology* answers all these questions and more, explaining what the subject has been in the past and what it is now. The main schools of thought and the sections within psychology are described, including Introspection, Biopsychology, Psychoanalysis, Behaviourism, Comparative Animal Psychology, Cognitive Approaches, including the Gestalt movement, Social Psychology, Developmental Psychology, and Humanism. The key figures covered include Freud, Pavlov, Skinner, Bandura, Piaget, Bowlby, Maslow, and Rogers, as well as many lesser known but important psychologists.

Teaching Peace Denny J. Weaver, Gerald Biesecker-Mast, 2003-09-08. This book opens a new frontier in understanding nonviolence. Discussions of peace and nonviolence usually focus on either moral theory or practical dimensions of applying nonviolence in conflict situations. *Teaching Peace* carries the discussion of nonviolence beyond ethics and into the rest of the academic curriculum. This book isn't just for religion or philosophy teachers; it is for all educators. *Teaching Peace* begins with a discussion rooted in Christian theology where nonviolence is so central and important. But it is clear that there are other paths to nonviolence and that one certainly doesn't have to be a Christian to practice nonviolence. The pieces that follow therefore show how a nonviolent perspective impacts disciplines across the curriculum from acting to biology to mathematics to psychology.

The Mind of the Market Michael Shermer, 2007-12-26. Bestselling author Michael Shermer explains how evolution shaped the modern economy and why people are so irrational about money. How did we make the leap from ancient hunter-gatherers to modern consumers and traders? Why do people get so emotional and irrational about bottom-line financial and business decisions? Is the capitalist marketplace a sort of Darwinian organism evolved through natural selection as the fittest way to satisfy our needs? In this eye-opening exploration, author and psychologist Michael Shermer uncovers the evolutionary roots of our economic behavior. Drawing on the new field of neuroeconomics, Shermer investigates what brain

scans reveal about bargaining snap purchases and establishing trust in business He scrutinizes experiments in behavioral economics to understand why people hang on to losing stocks why negotiations disintegrate into tit for tat disputes and why money does not make us happy He brings together astonishing findings from psychology biology and other sciences to describe how our tribal ancestry makes us suckers for brands why researchers believe cooperation unleashes biochemicals similar to those released during sex why free trade promises to build alliances between nations and how even capuchin monkeys get indignant if they don't get a fair reward for their work **Psychology in Perspective** Carol Tavris, 1995
