Computational Psychometrics: New Methodologies for a New Generation of Digital Learning and Assessment

Alina A. von Davier, Robert J. Mislevy, Jiangang Hao, 2022-01-01 This book defines and describes a new discipline named computational psychometrics from the perspective of new methodologies for handling complex data from digital learning and assessment The editors and the contributing authors discuss how new technology drastically increases the possibilities for the design and administration of learning and assessment systems and how doing so significantly increases the variety velocity and volume of the resulting data Then they introduce methods and strategies to address the new challenges ranging from evidence identification and data modeling to the assessment and prediction of learners performance in complex settings as in collaborative tasks game simulation based tasks and multimodal learning and assessment tasks Computational psychometrics has thus been defined as a blend of theory based psychometrics and data driven approaches from machine learning artificial intelligence and data science All these together provide a better methodological framework for analysing complex data from digital learning and assessments The term computational has been widely adopted by many other areas as with computational statistics computational linguistics and computational economics In those contexts computational has a meaning similar to the one proposed in this book a data driven and algorithm focused perspective on foundations and theoretical approaches established previously now extended and when necessary reconceived This interdisciplinarity is already a proven success in many disciplines from personalized medicine that uses computational statistics to personalized learning that uses well computational psychometrics We expect that this volume will be of interest not just within but beyond

the psychometric community In this volume experts in psychometrics machine learning artificial intelligence data science and natural language processing illustrate their work showing how the interdisciplinary expertise of each researcher blends into a coherent methodological framework to deal with complex data from complex virtual interfaces In the chapters focusing on methodologies the authors use real data examples to demonstrate how to implement the new methods in practice The corresponding programming codes in R and Python have been included as snippets in the book and are also available in fuller form in the GitHub code repository that accompanies the book

Data Analytics and Psychometrics Hong Jiao, Robert W. Lissitz, Anna Van Wie, 2018-12-01 The general theme of this book is to encourage the use of relevant methodology in data mining which is or could be applied to the interplay of education statistics and computer science to solve psychometric issues and challenges in the new generation of assessments In addition to item response data other data collected in the process of assessment and learning will be utilized to help solve psychometric challenges and facilitate learning and other educational applications Process data include those collected or available for collection during the process of assessment and instructional phase such as responding sequence data log files the use of help features the content of web searches etc Some book chapters present the general exploration of process data in large scale assessment Further other chapters also address how to integrate psychometrics and learning analytics in assessment and survey how to use data mining techniques for security and cheating detection how to use more assessment results to facilitate student s learning and guide teacher s instructional efforts The book includes both theoretical and methodological presentations that might guide the future in this area as well as illustrations of efforts to implement big data analytics that might be instructive to those in the field of learning and psychometrics The context of the effort is diverse including K 12 higher education financial planning and survey utilization It is hoped that readers can learn from different disciplines especially those who are specialized in assessment would be critical to expand the ideas of what we can do with data analytics for informing assessment practices

Measurement Models for Psychological Attributes Klaas Sijtsma, L. Andries van der Ark, 2020-10-22 Despite the overwhelming use of tests and questionnaires the psychometric models for constructing these instruments are often poorly understood leading to suboptimal measurement *Measurement Models for Psychological Attributes* is a comprehensive and accessible treatment of the common and the less than common measurement models for the social behavioral and health sciences The monograph explains the adequate use of measurement models for test construction points out their merits and drawbacks and critically discusses topics that have raised and continue to raise controversy Because introductory texts on statistics and psychometrics are sufficient to understand its content the monograph may be used in advanced courses on applied psychometrics and is attractive to both researchers and graduate students in psychology education sociology political science medicine and marketing policy research and opinion research The monograph provides an in depth discussion of classical test theory and factor models in Chapter 2 nonparametric and parametric item response theory in Chapter 3 and

Chapter 4 respectively latent class models and cognitive diagnosis models in Chapter 5 and discusses pairwise comparison models proximity models response time models and network psychometrics in Chapter 6 The chapters start with the theory and methods of the measurement model and conclude with a real data example illustrating the measurement model
