Property And The Law In Energy And Natural Resources:

Property and the Law in Energy and Natural Resources Aileen McHarg, 2010 The law of energy and natural resources has always had a strong focus on property as one of its components but there are relatively few comparative book length treatments of both property law and energy and natural resources law The aim of this edited collection is to explore the multiple dimensions of the contemporary relationship between property and energy and natural resources law Its genesis was the growing resurgence of global interest in questions of property in energy and resources and how it manifests itself across legal regimes around the world With an international and comparative character the collection seeks to capture differences in the meaning of property and the different views about the role it should play in a diverse range of contexts civil law and common law the law of indigenous communities public law and private law and national and international law Key issues discussed include private rights and common property situations privatization and regulation competition for land use and resources the role of property rights in environmental protection and the balance between national sovereignty and the security of foreign investment The collection thus has relevance for a wide readership interested in the legal dimensions of property as an increasingly important aspect of the law for energy and resources across diverse countries and at the international level The contributors are established experts in the energy and natural resources law field and the collection builds upon a body of previous collaborative work in this area

Property and the Law in Energy and Natural Resources, 2010 Examining the multiple interfaces between property law and energy and natural resources law this text deals with perennial questions about the ownership of energy and natural resources as well as dealing with the role of property rights in environmental regulation and the property rights of indigenous communities *The Routledge Handbook of Property, Law and Society* Nicole Graham, Margaret Davies, Lee Godden, 2022-11-14 This handbook brings together diverse perspectives major topics and multiple approaches to one of the biggest legal institutions in society property Property touches on many fundamental human questions It involves decisions about power economy morality work and ecology It also involves ideas about where humans fit in the world and how humans relate to more than human life This book will ask in myriad ways such questions as what property means what kinds of property there are what is and should be the relationship between owned and owner and what is the impact of different forms of property on life in this world Drawing on a range of socio legal and empirical methodologies renowned scholars and rising stars in property from around the world present current issues and map future directions in research Coming from the place of law but reaching out through cognate disciplines this handbook provides a comprehensive and accessible survey of current research at the interface of property society and the environment This handbook will appeal to students and researchers across a range of disciplines including law sociology geography history and economics

The Law and Governance of Mining and Minerals Ana Elizabeth Bastida, 2020-12-10 This book explores a disciplinary matrix for the study of the law and governance concerning mining and

minerals from a global perspective The book considers the key challenges of achieving the goals of Agenda 2030 and the transition to low carbon circular economies The perspective encompasses the multi faceted and highly complex interaction of multiple fields of international law and policy soft law and standards domestic laws and regulations as well as local levels of ordering of social relations What emerges is a largely neglected unsystematised and under theorised field of study which lies at the intersection of the global economy environmental sustainability human rights and social equity But it also underlies the many loopholes to address at all levels most notably at the local level land and land holders artisanal miners ecosystems local economies local linkages and development The book calls for a truly cosmopolitan academic discipline to be built and identifies challenges to do so It also sets a research agenda for further studies in this fast changing field **Property**

Rights and Sustainability David Grinlinton, Prue Taylor, 2011-04-11 This book offers a unique and thought provoking exploration of how property concepts can be substantially reshaped to meet ecological challenges It takes the discussion beyond its traditional parameters and offers new insights into conceptualizing and justifying property systems in an age of ecological consequences **Property Diversity and its Implications** John Page, 2016-08-05 Property is more diverse than is usually assumed Developing the concept of property diversity this book explores the varied role of property in placed human landscapes In acknowledging the propertied diversity about us the book highlights the paucity of our settled contemporary assumptions of property as defined by private ownership Challenging this universalizing model the book analyses how this self limiting view produces critical blind spots in modern property discourse In response it offers a re conceptualization of property that matches the grounded reality of our rich and diverse relationships with land Integrating the plurality of real property types private public and common with inclusive understandings of both interest and ownership it thus identifies and substantiates an overarching theory of property diversity Drawing on studies from numerous jurisdictions including the USA New Zealand Australia and the UK its analysis of property as something more and indeed other than a place less abstraction provides an invaluable contribution to the contemporary law and theory of property

The Rule of Law at the National and International Levels Machiko Kanetake, André Nollkaemper, 2016-04-21 This book aims to enhance understanding of the interactions between the international and national rule of law It demonstrates that the international rule of law is not merely about ensuring national compliance with international law International law and institutions eg international human rights treaty monitoring bodies and human rights courts respond to national contestations and show deference to the national rule of law While this might come at the expense of the certainty of international law it suggests that the international rule of law can allow for flexibility national diversity and pluralism The essays in this volume are set against the background of increasing conflict between international and national legal norms Moreover the book shows that international law and institutions do not always command blind national obedience to international law but incorporate a process of adjustment and deference to national law and policies that are protected by

the rule of law at the national level **Modern Studies in Property Law - Volume 9** Heather Conway, Robin Hickey, 2017-07-27 This book contains a collection of peer reviewed papers presented at the Eleventh Biennial Modern Studies in Property Law Conference held at Queen's University Belfast in April 2016 It is the ninth volume to be published under the name of the Conference The Conference and its published proceedings have become an established forum for property lawyers from around the world to showcase current research in the discipline This collection reflects the diversity and contemporary relevance of modern research in property law Following a foreword from the keynote speaker at the Conference Queen's alumnus Lord Kerr of Tonaghmore the chapters address a range of issues from the nature of land law and property rights through claims to the home and digital assets to the growing debate on the nature of public property Collectively the chapters demonstrate the vibrancy and importance of property law in dealing with modern concerns across the common law world **Encyclopedia of Energy, Natural Resource, and Environmental Economics**, 2013-03-29

Every decision about energy involves its price and cost The price of gasoline and the cost of buying from foreign producers the price of nuclear and hydroelectricity and the costs to our ecosystems the price of electricity from coal fired plants and the cost to the atmosphere Giving life to inventions lifestyle changes geopolitical shifts and things in between energy economics is of high interest to Academia Corporations and Governments For economists energy economics is one of three subdisciplines which taken together compose an economic approach to the exploitation and preservation of natural resources energy economics which focuses on energy related subjects such as renewable energy hydropower nuclear power and the political economy of energy resource economics which covers subjects in land and water use such as mining fisheries agriculture and forests environmental economics which takes a broader view of natural resources through economic concepts such as risk valuation regulation and distribution Although the three are closely related they are not often presented as an integrated whole This Encyclopedia has done just that by unifying these fields into a high quality and unique overview The only reference work that codifies the relationships among the three subdisciplines energy economics resource economics and environmental economics Understanding these relationships just became simpler Nobel Prize Winning Editor in Chief joint recipient 2007 Peace Prize Jason Shogren has demonstrated excellent team work again by coordinating and steering his Editorial Board to produce a cohesive work that guides the user seamlessly through the diverse topics This work contains in equal parts information from and about business academic and government perspectives and is intended to serve as a tool for unifying and systematizing research and analysis in business universities and government **Criminological and Legal Consequences of Climate Change** Stephen Farrall, Tawhida Ahmed, Duncan French, 2012-04-02 This edited collection the result of an international seminar held at the International Institute for the Sociology of Law Oñati Spain in 2010 explores the potential legal and criminological consequences of climate change both domestically and for the international community A novel feature of the book is the consideration given to the potential synergies between the two disciplinary foci thus to

encourage among legal scholars and criminologists not only an analysis of the consequences of climate change from these perspectives but to bring these fields together to provide a unique inter disciplinary exploration of the ways in which climate change does or could impact on our societies Such an inter disciplinary approach is necessary given that climate change is a multifaceted phenomenon and one which is intimately linked across disciplines To study this topic from the point of view of a single social science discipline restricts our understanding of the societal consequences of climate change It is hoped that this edited collection will identify emerging areas of concern illuminate areas for further research and most of all encourage future academic discussion on this most critical of issues
