Prospects For Managed Underground Storage Of Recoverable Water:

Prospects for Managed Underground Storage of Recoverable Water National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Sustainable Underground Storage of Recoverable Water, 2008-01-07 Growing demands for water in many parts of the nation are fueling the search for new approaches to sustainable water management including how best to store water. Society has historically relied on dams and reservoirs but problems such as high evaporation rates and a lack of suitable land for dam construction are driving interest in the prospect of storing water underground. Managed underground storage should be considered a valuable tool in a water manager's portfolio although it poses its own unique challenges that need to be addressed through research and regulatory measures.

Prospects for Managed Underground Storage of Recoverable Water, 2008 The report gives conclusions and recommendations for managed underground storage in four specific areas: hydrogeological, water quality, legal, economic, and institutional, and operational. It provides an integrated assessment of technical and institutional issues, guidance to prevent development of poorly conceptualized systems, and a scientific basis for monitoring operational systems. The authors conclude that managed underground storage systems will be an important tool in the arsenal of water management strategies and that the findings in the report will help make the tool more accessible and sustainable for water supply managers as future demands increase.

Water Reclamation Technologies for Safe Managed Aquifer Recharge Christian Kazner, Thomas Wintgens, Peter Dillon, 2012-04-14 Part of Groundwater Set Buy all six books and save over 30% on buying separately. Water Reclamation Technologies for Safe Managed Aquifer Recharge has been developed from the RECLAIM WATER project supported by the European Commission under Thematic Priority Global Change and Ecosystems of the Sixth Framework Programme. Its strategic objective is to develop hazard mitigation technologies for water reclamation providing safe and cost-effective routes for managed aquifer recharge. Different treatment applications in terms of behaviour of key microbial and chemical contaminants are assessed. Engineered as well as natural treatment trains are investigated to provide guidance for sustainable MAR schemes using alternative sources such as effluent and stormwater. The technologies considered are also well suited to the needs of developing countries which have a growing need of supplementation of freshwater resources. A broad range of international full-scale case studies enables insights into long-term system behaviour, operational aspects, and fate of a comprehensive number of compounds and contaminants, especially organic micropollutants and bulk organics. Water Reclamation Technologies for Safe Managed Aquifer Recharge depicts advances in water reclamation technologies and aims to provide new process combinations to treat alternative water sources to appropriate water quality levels for sustainable aquifer recharge. Editors: Christian Kazner, RWTH Aachen University, Germany; Thomas Wintgens, University of Applied Sciences and Arts, Northwestern Switzerland; Peter Dillon, CSIRO, Australia.

Arid Lands Water Evaluation and Management Robert Maliva, Thomas Missimer, 2012-06-09 A large part of the global population lives in arid lands which

have low rainfall and often lack the water required for sustainable population and economic growth This book presents a comprehensive description of the hydrogeology and hydrologic processes at work in arid lands It describes the techniques that can be used to assess and manage the water resources of these areas with an emphasis on groundwater resources including recent advances in hydrologic evaluation and the differences between how aquifer systems behave in arid lands versus more humid areas Water management techniques are described and summarized to show how a more comprehensive approach to water management is required in these areas including the need to be aware of cultural sensitivities and conditions unique to many arid regions The integration of existing resources with the addition of new water sources such as desalination of brackish water and seawater along with reusing treated wastewater will be required to meet future water supply needs Also changing climatic conditions will force water management systems to be more robust so that future water supply demands can be met as droughts become more intense and rainfall events become more intense A range of water management techniques are described and discussed in order to illustrate the methods for integrating these measures within the context of arid lands conditions

Regional Water Security Robert C. Brears,2021-03-03 REGIONAL WATER SECURITY Regional Water Security provides new research on policy innovations that promote the application of demand management and green infrastructure GI in managing water resources across regions sustainably In particular with regional water security around the world at risk from climatic and non climatic challenges impacting water quantity and water quality this book in addition to providing examples of demand management and GI being implemented in various locations globally contains in depth case studies that illustrate how regions of differing climates lifestyles and income levels have implemented policy innovations that promote the application of demand management and GI to achieve regional water security for humans while protecting and restoring the natural environment Regional Water Security will be of interest to regional water resource managers town and regional planners resource conservation managers policymakers international companies and organizations as well as environmental NGOs researchers and graduate and undergraduate students

Groundwater Management Practices Angelos N. Findikakis,Kuniaki Sato,2011-06-08 The book presents and compares practices followed in various different countries for the development protection and management of groundwater resources It includes overviews of technical and non technical aspects of groundwater management practices and selected case studies in different countries Further it provides reviews of specific technical issues such as groundwater quality management and protection groundwater impacts of underground structures and hazards of artificial recharge and discharge discussions of regulatory and legal issues affecting groundwater management

Handbook on Particle Separation Processes Arjen van Nieuwenhuijzen,Jaap van der Graaf,2011-09-19 Particles in water play an important role in all kinds of water quality and treatment issues Since the early beginnings of centralised water production and treatment the main goal of water purification was primarily the removal of water turbidity in order to produce clear water free from visible particles The Handbook on Particle Separation Processes

provides knowledge and expertise from a selected group of international experts with a wealth of experience in the field of particles and particle separation in water and wastewater treatment The Handbook on Particle Separation Processes includes an edited selection of presentations and workshops held at the academic summer school Particle Separation in Water and Wastewater Treatment organised under the supervision of the IWA Specialist Group Particle Separation

Anthropogenic Aquifer Recharge Robert G. Maliva,2019-05-07 The book is an overview of the diversity of anthropogenic aquifer recharge AAR techniques that use aquifers to store and treat water It focusses on the processes and the hydrogeological and geochemical factors that affect their performance This book is written from an applied perspective with a focus of taking advantage of global historical experiences both positive and negative as a guide to future implementation Most AAR techniques are now mature technologies in that they have been employed for some time their scientific background is well understood and their initial operational challenges and associated solutions have been identified However opportunities exist for improved implementation and some recently employed and potential future innovations are presented AAR which includes managed aquifer recharge MAR is a very important area of water resources management and there is no recent books that specifically and comprehensively addresses the subject **Toward a Sustainable and Secure Water Future** National Research Council,Division on Earth and Life Studies,Water Science and Technology Board,Committee on Water Resources Activities at the U.S. Geological Survey,2009-09-03 Water is our most fundamental natural resource a resource that is limited Challenges to our nation s water resources continue to grow driven by population growth ecological needs climate change and other pressures The nation needs more and improved water science and information to meet these challenges Toward a Sustainable and Secure Water Future reviews the United States Geological Survey s USGS Water Resource Discipline WRD one of the nation s foremost water science organizations This book provides constructive advice to help the WRD meet the nation s water needs over the coming decades Of interest primarily to the leadership of the USGS WRD many findings and recommendations also target the USGS leadership and the Department of Interior DOI because their support is necessary for the WRD to respond to the water needs of the nation **Alternatives for Managing the Nation's Complex Contaminated Groundwater Sites** National Research Council,Division on Earth and Life Studies,Water Science and Technology Board,Committee on Future Options for Management in the Nation's Subsurface Remediation Effort,2013-02-27 Across the United States thousands of hazardous waste sites are contaminated with chemicals that prevent the underlying groundwater from meeting drinking water standards These include Superfund sites and other facilities that handle and dispose of hazardous waste active and inactive dry cleaners and leaking underground storage tanks many are at federal facilities such as military installations While many sites have been closed over the past 30 years through cleanup programs run by the U S Department of Defense the U S EPA and other state and federal agencies the remaining caseload is much more difficult to address because the nature of the contamination and subsurface conditions make it difficult to achieve

drinking water standards in the affected groundwater Alternatives for Managing the Nation's Complex Contaminated Groundwater Sites estimates that at least 126 000 sites across the U S still have contaminated groundwater and their closure is expected to cost at least 110 billion to 127 billion About 10 percent of these sites are considered complex meaning restoration is unlikely to be achieved in the next 50 to 100 years due to technological limitations At sites where contaminant concentrations have plateaued at levels above cleanup goals despite active efforts the report recommends evaluating whether the sites should transition to long term management where risks would be monitored and harmful exposures prevented but at reduced costs
