The Untold Story of the World's Leading Environmental Institution Maria Ivanova, 2021-02-23 The past present and possible future of the agency designed to act as the world's environmental conscience The United Nations Environmental Programme UNEP was founded in 1972 as a nimble fast and flexible entity at the core of the UN system a subsidiary body rather than a specialized agency It was intended to be the world's environmental conscience an anchor institution that established norms and researched policy leaving it to other organizations to carry out its recommendations In this book Maria Ivanova offers a detailed account of UNEP's origin and history Ivanova counters the common criticism that UNEP was deficient by design arguing that UNEP has in fact delivered on much though not all of its mandate

Twenty Years of Ozone Decline Christos Zerefos, G. Contopoulos, Gregory Skalkas, 2009-05-24 Homer speaks of lightning bolts after which a grim reek of sulphur bursts forth and the air was lled with reeking brimstone Homer 3000 BC The odour was not actually the smell of sulphur dioxide associated with burning sulphur but rather was the rst recorded detection of the presence of another strong odour that of ozone O_3 in Earth's atmosphere These molecules were formed by the passage of 3 lightning through the air created by splitting the abundant molecular oxygen O_2 molecules into two followed by the addition of each of the free O atoms to another O to form the triatomic product In fact most of the ozone molecules present in the atmosphere at any time have been made by this same two step

splitti plus combination process although the initiating cause usually begins with very energetic solar ultraviolet UV radiation rather than lightning Many thousands of years later the modern history of ozone began with its synthesis in the laboratory of H F Schonbein in 1840 Nolte 1999 although the positive confirmation of its three oxygen atom chemical formula came along sometime later Scientific interest in high altitude stratospheric ozone dates back to 1881 when Hartley measured the spectrum of ozone in the laboratory and found that its ability to absorb UV light extended only to 293nm at the long wavelength end Hartley 1881a

From Precaution to Profit Brian Gareau, 2013-01-29 This book challenges the oft cited belief that the Montreal Protocol remains an exemplary global environmental agreement. Through a sociological analysis of the political decision making process and controversies generated at Montreal Protocol meetings, the book documents new ways global environmental governance is organized based on neoliberal ideals. The book shows how neoliberalism as a dominant discourse and economic practice has become increasingly embedded in the Montreal Protocol and how global powers are able to act protectionist amid that discourse. The book demonstrates how recent controversies involve much more than just economic protectionism per se; it also involves the protection of the legitimacy of certain forms of scientific knowledge. It traces the rise of a new form of disagreement between global powers, members of the scientific community, civil society, and agro-industry groups, signaling the negative impact of neoliberal policies on ozone politics and global environmental governance more broadly. The book reveals how global civil society groups involved in the Montreal Protocol are affected by the neoliberal discourse which has left them relatively ineffective in their efforts to push for environmental protection.
