Introduction to Crystal Growth and

Characterization Klaus-Werner Benz, Wolfgang Neumann, 2014-07-28 This new textbook provides for the first time a comprehensive treatment of the basics of contemporary crystallography and crystal growth in a single volume The reader will be familiarized with the concepts for the description of morphological and structural symmetry of crystals The architecture of crystal structures of selected inorganic and molecular crystals is illustrated The main crystallographic databases as data sources of crystal structures are described Nucleation processes their kinetics and main growth mechanism will be introduced in fundamentals of crystal growth Some phase diagrams in the solid and liquid phases in correlation with the segregation of dopants are treated on a macro and microscale Fluid dynamic aspects with different types of convection in melts and solutions are discussed Various growth techniques for semiconducting materials in connection with the use of external field magnetic fields and microgravity are described Crystal characterization as the overall assessment of the grown crystal is treated in detail with respect to crystal defects crystal quality field of application Introduction to Crystal Growth and Characterization is an ideal textbook written in a form readily accessible to undergraduate and graduate students of crystallography physics chemistry materials science and engineering It is also a valuable resource for all scientists concerned with crystal growth and materials engineering

β -barrel Channel Proteins

as Tools in Nanotechnology

Marco Fioroni, Tamara Dworeck, Francisco Rodriguez-Ropero, 2013-11-04

barrel outer membrane channel proteins OMP are useful as robust and flexible models or components in nanotechnology Over the last decade biotechnological techniques allowed to expand the natural characteristics of OMPs by modifying their geometry and properties The present book is oriented towards a broad group of readers including graduate students and advanced

researchers It gives a general introduction to the field of OMP based nano component development as well as the state of the art of the involved research On the example of the E coli FhuA the transformation of an OMP into a tailored nano channel will be outlined An exhaustive description of the scientific strategy including protein selection analytical methods and in silico tools to support the planning of protein modifications for a targeted application consideration on the production of a custom made OMP and an overview on technological applications including membrane polymersome technology will be provided

Structural Genomics on Membrane Proteins Kenneth H. Lundstrom,2006-02-23 While the genomic revolution has quickly led to the deposit of more than 30 000 structures in the protein data bank PDB less than one percent of those contributions represent membrane proteins despite the fact that membrane proteins constitute some 20 percent of all proteins This discrepancy becomes significantly troublesome when it is coupled **Imaging Life** Gary C.
