Frontiers of Combining Systems F. Baader, K.U. Schulz, 2013-11-09 Donation refusal is high in all the regions of Argentina The deficient operative structure is a negative reality that allows inadequate donor maintenance and organ procurement In more developed regions there are a high number of organs which are not utilized This is true for heart liver and lungs Small waiting lists for these organs probably reflect an inadequate economic coverage for these organ transplant activities There is a long waiting list for cadaveric kidney transplants which reflect poor procurement and transplant activity Lack of awareness

by many physicians leads to the denouncing of brain deaths In spite of these factors we can say that there has been a significant growth in organ procurement and transplantation in 1993 after the regionalization of the INCUCAI Conclusions Is there a shortage of organs in Argentina There may be But the situation in Argentina differs from that in Europe as we have a pool of organs which are not utilized donation refusal operational deficits lack of denouncing of brain deaths Perhaps in the future when we are able to make good use of all the organs submitted for transplantation we will be able to say objectively whether the number of organs is sufficient or not Acknowledgements I would like to thank the University of Lyon and the Merieux Foundation especially Professors Traeger Touraine and Dr Dupuy for the honour of being invited to talk about the issue of organ procurement
