

Biology - 4.2 Niches and Community Interactions

I. The Niche A niche is the **range of physical and biological conditions** in which a species lives and the way the species obtains what it needs to survive and reproduce.

A. Tolerance

- a. Every species has its own **range of tolerance**, the ability to survive and reproduce under a **range of environmental circumstances**.

- b. Organisms have an **upper and lower limit of tolerance** for every environmental factor. Beyond those limits, the organism **cannot survive**.
- c. A species' tolerance for environmental conditions, then, helps determine its **habitat**—the general place **where an organism lives**.

B. Defining the Niche

- a. An organism's **niche** describes not only the environment where it lives, but **how it interacts** with **biotic** and **abiotic factors** in the environment.
- b. The term **resource** is any necessity needed for survival.
- i. **Physical Aspects of the Niche** - Part of an organism's niche involves the **abiotic factors** it requires for survival; (water, weather, etc)
 - ii. **Biological Aspects of the Niche** - Biological aspects of an organism's niche involve the **biotic factors** it requires for survival, such as when and how it **reproduces**, the **food** it eats, and the way in which it obtains that food.

II. Competition - How does competition shape communities?

By causing species to divide resources, competition helps **determine the number and kinds of species** in a community and the niche each species occupies.

A. The Competitive Exclusion Principle

- a. Direct competition between different species almost always produces a **winner** and a **loser**—and the losing species **dies out**.
- b. The **competitive exclusion principle** states that **no two species can occupy** exactly the same niche in exactly the same habitat at exactly the **same time**.
- c. If two species attempt to occupy the same niche, **one species will be better at** competing for limited resources and will eventually **exclude the other species**.

B. Dividing Resources
