Night Thoughts Of A Classical Physicist:

Night Thoughts of a Classical Physicist Russell McCormmach, 1991 It is the end of an historical epoch but to an old professor of physics Victor Jakob sitting in his unlighted study eating dubious bread with jam made from turnips it is the end of a way of thinking in his own subject Younger men have challenged the classical world picture of physics and are looking forward to observational tests of Einstein's new theory of relativity as well as the creation of a quantum mechanics of the atom It is a time of both apprehension and hope In this remarkable book the reader literally inhabits the mind of a scientist while Professor Jakob meditates on the discoveries of the past fifty years and reviews his own life and career his scientific ambitions and his record of small successes He recalls the great men who taught or inspired him Helmholtz Hertz Maxwell Planck and above all Paul Drude whose life and mind exemplified the classical virtues of proportion harmony and grace that Jakob reveres In Drude's shocking and unexpected suicide we see reflected Jakob's own bewilderment and loss of bearings as his once secure world comes to an end in the horrors of the war and in the cultural fragmentation wrought by twentieth century modernism His attempt to come to terms with himself with his life in science and with his spiritual legacy will affect deeply everyone who cares about the fragile structures of civilization that must fall before the onrush of progress

Hermann von Helmholtz and the Foundations of Nineteenth-Century Science David Cahan, 1994-01-12 Hermann von Helmholtz 1821-1894 was a polymath of dazzling intellectual range and energy Renowned for his co-discovery of the second law of thermodynamics and his invention of the ophthalmoscope Helmholtz also made many other contributions to physiology physical theory philosophy of science and mathematics and aesthetic thought During the late nineteenth century Helmholtz was revered as a scientist sage much like Albert Einstein in this century David Cahan has assembled an outstanding group of European and North American historians of science and philosophy for this intellectual biography of Helmholtz the first ever to critically assess both his published and unpublished writings It represents a significant contribution not only to Helmholtz scholarship but also to the history of nineteenth century science and philosophy in general **The Oxford Illustrated**

History of Science Iwan Rhys Morus, 2017-06-16 The Oxford Illustrated History of Science is the first ever fully illustrated global history of science from Aristotle to the atom bomb and beyond The first part of the book tells the story of science in both East and West from antiquity to the Enlightenment from the ancient Mediterranean world to ancient China from the exchanges between Islamic and Christian scholars in the Middle Ages to the Chinese invention of gunpowder paper and the printing press from the Scientific Revolution of sixteenth and seventeenth century Europe to the intellectual ferment of the eighteenth century The chapters that follow focus on the increasingly specialized story of science since end of the eighteenth century covering experimental science in the laboratory from Michael Faraday to CERN the exploration of nature from intrepid Victorian explorers to twentieth century primatologists the mapping of the universe from the discovery of Uranus to Big Bang theory the impact of evolutionary ideas from Lamarck Darwin and Wallace to DNA and the story of theoretical

physics from James Clark Maxwell to Quantum Theory and beyond A concluding chapter reflects on how scientists have communicated their work to a wider public from the Great Exhibition of 1851 to the internet in the early twenty first century

The Oxford Handbook of the History of Physics Jed Z. Buchwald, Robert Fox, 2013-10 This Oxford Handbook brings together contributions by leading authorities on key areas of the history of physics since the seventeenth century In a single volume it offers a comprehensive introduction to scholarly contributions that have tended to be dispersed in journals and books not easily accessible to the student or general reader

Heidegger, Dilthey, and the Crisis of Historicism

Charles R. Bambach, 2018-09-05 The collapse of historicism was not merely the demise of an academic tradition but signified a shift in the understanding of hermeneutics and metaphysics Whereas earlier books have explored the rise and dominance of historicism within academic history this is the first to trace its collapse and to show how it was shaped by larger philosophical and scientific concerns Charles R Bambach's lucid account of the demise of historicism within the context of German metaphysics provides a rich new perspective on the development of the young Heidegger's concept of historicity and on the origins of postmodern thought Bambach reconstructs the methodological debates arising from a pervasive sense of crisis among German philosophers in the late nineteenth century He details the divergent attempts by the Neo Kantians Nietzsche and Dilthey to overcome the limitations of historical relativism Heidegger's view of historicity Bambach shows radically transforms the problematic of historicism into a discourse concerning the crisis of philosophical modernity

Out of the Crystal Maze Lillian Hoddeson, Ernst Braun, Jürgen Teichmann, Spencer Weart, 1992-10-01 This landmark work chronicles the origin and evolution of solid state physics which grew to maturity between 1920 and 1960 The book examines the early roots of the field in industrial scientific and artistic efforts and traces them through the 1950s when many physicists around the world recognized themselves as members of a distinct subfield of physics research centered on solids The book opens with an account of scientific and social developments that preceded the discovery of quantum mechanics including the invention of new experimental means for studying solids and the establishment of the first industrial laboratories The authors set the stage for the modern era by detailing the formulation of the quantum field theory of solids The core of the book examines six major themes the band theory of solids the phenomenology of imperfect crystals the puzzle of the plastic properties of solids solved by the discovery of dislocations magnetism semiconductor physics and collective phenomena the context in which old puzzles such as superconductivity and superfluidity were finally solved All readers interested in the history of science will find this absorbing volume an essential resource for understanding the emergence of contemporary physics

Understanding Relativity GOLDBERG, 2013-06-29 The central subject matter of this book is Einstein's special theory of relativity While it is a book that is written primarily for a lay audience this does not necessarily mean an audience not versed in the ways of doing science Rather this book is written for anyone wishing to consider the nature of the scientific enterprise where ideas come from how they become established and accepted what the relationships are among theories

predictions and measurements or the relationship between ideas in a scientific theory and the values held to be important within the larger culture Some readers will find it strange that I raise any of these issues It is a common view in our culture that the status of knowledge within science is totally different from the status of knowledge in other areas of human endeavor The word science stems from the Latin word meaning to know and indeed knowledge which scientists acquire in their work is commonly held to be certain unyielding and absolute Consider how we use the adjective scientific There are investors and there are scientific investors There are socialists and there are scientific socialists There are exterminators and there are scientific exterminators We all know how the modifier scientific intrudes in our daily life It is the purpose of this book to challenge the belief that scientific knowledge is different from other kinds of knowledge **Hitler's Scientists** John Cornwell, 2013-09-26 In a rich and fascinating history John Cornwell tells the epic story of Germany's scientists from the First World War to the collapse of Hitler's Reich He shows how Germany became the world's Mecca for inventive genius taking the lion's share of Nobel awards before Hitler's regime hijacked science for wars of conquest and genocidal racism Cornwell gives a dramatic account of the wide ranging Nazi research projects from rockets to nuclear weapons the pursuit of advanced technology for irrational ends concluding with with penetrating relevance for today the inherent dangers of science without conscience *Routledge Library Editions: Science and Technology in the Nineteenth Century* Various, 2021-07-14 This set of 10 volumes originally published between 1900 and 1994 amalgamates a wide breadth of research on Science and Technology in the Nineteenth Century including studies on notable figures such as Gregor Johann Mendel Elizabeth Garrett Anderson and Sir Humphry Davy This collection of books from some of the leading scholars in the field provides a comprehensive overview of the subject how it has evolved over time and will be of particular interest to students of history and the sciences *Only the Longest Threads* Tasneem Zehra Husain, 2014-10-29 Part fiction part overview of Aha moments in the forward march of physics Only the Longest Threads takes readers dramatically through scientific fields such as quantum field theory electromagnetism relativity quantum mechanics and string theory Each idea or concept is explored in an inventive chapter each told from a different first person narrator the faux emails letters and diary entries take place from 1728 to the present day *Being Boing The Best Books for Nerds* from 2014 Science is done by real human beings with human concerns Only the Longest Threads tells a story that conveys the human side of science in a way that is as moving as it is accurate Sean Carroll theoretical physicist at Caltech and author of *The Particle at the End of the Universe* Only the Longest Threads will thrill readers with its dramatic and lucid accounts of the great breakthroughs in the history of physics classical mechanics electromagnetism relativity quantum mechanics quantum field theory and string theory each from the viewpoint of a fictional witness to the events Tasneem Zehra Husain reimagines the pivotal moments in the history of physics when radical new theories shifted our perception of the universe and our place in it Husain immerses the reader in the immediacy and excitement of the discoveries and she guides us as we begin to understand the underlying science and to grasp the

revolutionary step forward each of these milestones represents Tasneem Zehra Husain writes lyrically poetically about life love and physics I highly recommend this wonderful book for anyone interested in what physics and indeed all of science is about She masterfully describes the most momentous moments in physics history with verve and talent Amir D Aczel bestselling author of Fermat's Last Theorem A delightful meditation on the development of modern physics culminating in the discovery of the Higgs Husain follows the thread of its creation through a dialog between a journalist and young theory student and as seen through the eyes of witnesses John Huth Donner Professor of Science Harvard University Well written and cleverly constructed this book takes us on a journey through the history of physics as a series of fictional adventures loosely linked by another fiction the storytellers emails to each other Some books are praised because I couldn't put it down but this one merits a deeper reading one that stops muses on and savors each story before going on to the next Each one captures not only the emergence of a significant idea in physics but also something of the characters culture and times surrounding that development So take your time pause to ponder but persevere you will be well rewarded Helen R Quinn Physicist Science Educator and co author of The Mystery of the Missing Antimatter Professor Emeritus SLAC National Accelerator Laboratory How do theoretical physicists think Tasneem Zehra Husain knows She knows their purpose feels their passions articulates their frustrations shares their triumphs Through the device of fiction Only the Longest Threads communicates the history of physical thought its roots in inquisitiveness and essential disinterest in outcome with greater clarity than any popular science text Michael Duff FRS Abdus Salam Professor of Theoretical Physics Imperial College London An artfully constructed journey through space and time Freddy Cachazo Perimeter Institute for Theoretical Physics Husain skillfully weaves a poetic tapestry Joseph Mazur author of Enlightening Symbols
