Phosphorus Biogeochemistry of Sub-Tropical Ecosystems K. Ramesh Reddy, George A. O'Connor, C. L. Schelske, 1999-04-29 Phosphorus is one of the major nutrients limiting the productivity of terrestrial wetland and aquatic ecosystems Over the last decade several research projects were conducted on Florida's ecosystems from state and federal agencies and private industry to address water quality issues and to develop management practices to control nutrient loads *Phosphorus Biogeochemistry in Sub Tropical Ecosystems* is the first thorough study of the role of phosphorus in ecological health and water quality ever published Because of its vast and extensively studied ecosystems Florida has often served as a national laboratory on current and future trends in ecosystem management The reader will find studies at all levels of biological organization from the cellular to entire ecological communities The book is a definitive study of the role and behavior of phosphorus deposition in the upland wetland aquatic environment The papers presented in this book are organized in specific groups ecological analysis and global issues biogeochemical transformations biogeochemical responses transport processes phosphorus management and synthesis Although Florida's ecosystems are used as a case study the results presented have global applications
