Pigments

1. What are the different types of plant pigments?

Chlorophyll A and B, Xanthophyll, Carotenoids, ... Accessory Pigments

2. Why are there different plant pigments? *So that small amounts of green light can be absorbed and used by the plant for photosynthesis*
3. Why are plants green? (Explain by using the terms absorb and reflect.) *Plants have mostly green chlorophyll so they reflect green light back to our eye. They absorb all other colors to do photosynthesis*
4. Where are the pigments contained within the chloroplast? *In the thylakoid*
5. What would you expect to happen if you grew a plant in green light? *It would grow very slowly or die*
6. Draw and label the parts of a chloroplast. Know where each step of photosynthesis occurs.

Chloroplast

7. Why is the purpose of chromatography? *To separate plant pigments to see the accessory pigments*
8. How does chromatography separate pigments? *Alcohol causes each pigment to rise up the filter paper a different amount*
9. How does chlorophyll contribute the first step of photosynthesis? *It is used in the light reaction- chlorophyll captures the photons from the sun.*

Photosynthesis

10. Write out the equation for photosynthesis. What is its relationship to the equation for respiration?

$$6\text{CO}_2 + 6\text{H}_2\text{O} + \text{sunlight} \rightarrow \text{C}_6\text{H}_{12}\text{O}_6 + 6\text{O}_2$$
It is the opposite of respiration.
11. What is the BIG idea of photosynthesis? *Sugars are broken down to release energy*
12. How did we measure the rate photosynthesis in lab? Why is this a reliable way to measure photosynthesis? *We will still do this lab on Thursday! We will count the number of Oxygen bubbles coming off of underwater plant leaves.*
13. From what step of photosynthesis do the bubbles in your lab come from? What is occurring to cause the bubbles? *Light reaction is breaking down water and releasing Oxygen as waste.*

Science Curriculum Topic Study Page Keeley, 2005-02-23 Without question this book will be of great value to the profession of science teaching. Given today's educational landscape of standards and high stakes testing, curriculum topic study is an essential piece of the puzzle. Cary Sneider, Vice President for Educator Programs, Museum of Science, Boston. Discover the missing link between science standards, teacher practice, and improved student achievement. Becoming an accomplished science teacher not only requires a thorough understanding of science content but also a familiarity with science standards and research on student learning. However, a comprehensive strategy for translating standards and research into instructional practice has been lacking since the advent of standards-based education reform. Science Curriculum Topic Study provides a systematic professional development strategy that links science standards and research to curriculum instruction and assessment. Developed by author Page Keeley of the Maine Mathematics and Science Alliance, the Curriculum Topic Study CTS process can help teachers align curriculum instruction and assessment with specific research-based ideas and skills. The CTS process will help teachers improve their understanding of science content, clarify a hierarchy of content and skills in a learning goal from state or local standards, define formative and summative assessment goals and strategies, learn to recognize and address learning difficulties, increase opportunities for students of all backgrounds to achieve science literacy, design or utilize instructional materials effectively. Containing 147 separate curriculum topic study guides arranged in eleven categories that represent the major domains of science, this book provides the tools to both positively impact student learning and develop the knowledge and skills that distinguish expert science teachers from novices.
