Transforming Assessment Jens Dolin, Robert Evans, 2017-10-14 This book reports the results of a research project that investigated assessment methods aimed at supporting and improving inquiry based approaches in European science technology and mathematics STM education The findings were used to influence policy makers with guidelines for ensuring that assessment enhances learning The book provides insights about The concept of competence within the STM domains and its relevance for education The conceptualisation and teaching of four key competences scientific inquiry mathematical problem solving design processes and innovation Fundamental aspects of the two main purposes of assessment formative and summative the relations between the two purposes and ways of linking them The main challenges related to the uptake of formative assessment in daily teaching learning practices in STM and specifically the usability of formative on the fly dialogue structured assessment dialogue peer assessment and written teacher feedback The systemic support measures and tools teachers need in order to integrate formative assessment of student learning into their classroom practices and how it can conflict with summative assessment practices How research based strategies for the formative use of assessment can be adapted to various European educational traditions to ensure their effective use and avoid undesirable consequences How relevant stakeholders can be invited to take co ownership of research results and how a productive partnership between researchers policy makers and teachers can be established Concrete research vistas that are still needed in international assessment research

Million Dollar Data: Building Confidence - Vol.1 Stephen DeMeo, 2020-07-31 Global warming our current and greatest challenge is without precedent Among the many consequences that are impacting our society one unanticipated concern involves scientific truth When the President of the United States and others in his administration declare that global warming is fake science it calls into question what real science is and what real school science should be I will argue that real science is quality science one that is based on the rigorous collection of reliable and valid data To collect quality data requires bending over backwards to get things right and this is exactly what makes science so special Truth is made when scientists go this extra yard and devise controlled experiments collect large data sets confirm the data and rationally analyze their results Making scientific truth sounds difficult to do in the science laboratory but in reality there are many straightforward ways that truth can be constructed In the first of two volumes I discuss twelve such ways I call them Confidence Indicators that can allow students to strongly believe in their data and their subsequent results Many of these methods are intuitive and can be used by young students on the late elementary level all the way up to those taking introductory college science courses As in life science is not without doubt In the second volume I introduce the concept of scientific uncertainty and the indicators used to calculate its magnitude I will show that science is about connecting confidence with uncertainty in a specific manner

what I refer to as the Confidence Uncertainty Continuum expression This important relationship epitomizes the scientific enterprise as a search for probabilistic rather than absolute truth This two volume set will contain a variety of ways that data quality can be instituted into a science curriculum To support its use many of the examples that I will present involve science teachers as well as student work and feedback from different grade levels and in different scientific disciplines Specific chapters will be devoted to reviewing the academic literature on data quality as well as describing my own personal research on this important but often neglected topic
